            This is the 5' sequence of the clone insert
            Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
            Research Center (DKFZ); Email s.wiemann@dkfz- heidelberg.de;
            sequenced by EMBL (European Molecular Biology Laboratories,
            Heidelberg/Germany) within the cDNA sequencing consortium of the
            German Genome Project.
            No s1 sequence available.
            This clone (DKFZp686G0621) is available at the RZPD in Berlin.
            Please contact the RZPD: Ressourcenzentrum, Heubnerweg 6, 14059
            Berlin-Charlottenburg, GERMANY; Email: clone@rzpd.de.

/note="Vector: pCNS; Site_1: EcoRI; Site_2: NotI; The poly (A)+ RNA was dephosphorylated with bacterial alkaline phosphatase (BAP) and then decapped with tabacco acid pyrophosphatase (TAP). The decapped intact mRNA was ligated with DNA-RNA linker including EcoR I site by treatment of T4 RNA ligase and the first strand cDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The cDNA vector was circularized with E. coli DNA ligase after digestion of EcoRI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coli Top10F' by electroporation method. The cDNA libraries constructed by this method are full-length enriched cDNA library."

            Email: help@image.llnl.gov
            This read has been verified (found to hit its original self in the
            correct orientation), as part of the I.M.A.G.E. Consortium quality
            control effort. High quality sequence is defined as having 100 or
            more base pairs with a phred quality value of 20 or greater, where
            a sliding window of 4 base pairs with a phred quality value of 15
            or greater marks the beginning and end of the sequence. For
            information on obtaining this clone, please contact
            info@image.llnl.gov.

40 32 32 26 32 26 24 Sequences were generated on ABI 3100 and 3700 capillary sequencers. Raw sequence data was batch processed analyzed, groomed and submitted by the Animal Biotechnology Center (URL: http://primer.ansci.umn.edu/software1.html),University of Minnesota. Trace files have been submitted to the NCBI trace archive(http://www.ncbi.nlm.nih.gov/Traces/trace.cgi?).
Chromatograms were analyzed with Phred Version: 0.000925.c . Vector (pCMV_SPORT6, Invitrogen), Sus scrofa mitochondrion (gi|5835862|ref|NC_000845.1),Escherichia coli K12(gi|5835862|ref|NC_000913.1|),Porcine reproductive and respiratory syndrome virus(gi|11878202|gb|AF303357.1|AF303357),Alteromonas sp.16S rRNA gene(gi|4218471|emb|Y15322.1|PLY15322),Sus scrofa 28S ribosomal RNA(gi|3388170|gb|AF080393.1|AF080393),and Sus scrofa 18S ribosomal RNA(gi|3885982|gb|AF102857.1|AF102857) Sequences were identified and masked by Crossmatch -minscore=20, -minmatch=12, -penalty=-8. SWAT alignment scores were set to match score=1, gap initial penalty=-3 and gap extension penalty=-2. A continuous stretch of at least 50 bases of a PHRED quality 20 were required for submission.5' and 3' TERMINI were defined by a continuous stretch of 10 nucleotides with a PHRED quality not less than 20. A terminal stretch of at most 40 un-masked bases were automatically trimmed when flanking masked sequence.Sequences with an INTERNAL continuous stretch of at most 20 bases with PHRED quality less than 20 were automatically prepared for submission. HIQUAL_START and HIQUAL_STOP refer to the coordinates on CLIP_QUALITY and CLIP_VECTOR at the NCBI trace archive.
Plate: 21 row: C column: 09
Seq primer: SP6 primer

/note="Organ: small intestine, jejunum; Vector: pCMVSPORT6; Site_1: NotI; Site_2: SalI; Jejunal Peyer's patches were isolated from healthy, 4-6 week old cross-bred pigs. RNA was extracted either immediately or after 3 hours stimulation in an Ussing chamber with one of the following treatments: 1) no treatment, 2) Salmonella choleraesuis vaccine strain SC-54, 3) phorbol myristate acetate, concanavalin A, and 8-bromo-cyclic AMP, and 4) lipopolysaccharide and cholera toxin. Each treatment was performed in the presence and absence of cycloheximide. Purified poly A + RNA from each of the treated tissues (2-4) was combined together, reverse transcribed, and cloned in to pCMVSPORT6 to make a library of approximately 530,000 recombinant clones with an average insert size of 1.0 kbp. Poly A+ RNA from freshly isolated and non-treated tissue from an Ussing chamber (treatment 1) was cloned in the same manner to produce an unstimulated cDNA library of approximately 900,000 clones with an average insert size of 1.5 kbp. Equal portions of the two libraries were pooled and then subtracted with porcine ST fibroblast RNA to create a subtracted porcine Peyer's patch library of approximately 6,000 clones with an average insert size of 1.0 kbp."

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/note="Vector: pCNS; Site_1: EcoRI; Site_2: NotI; The poly (A)+ RNA was dephosphorylated with bacterial alkaline phosphatase (BAP) and then decapped with tabacco acid pyrophosphatase (TAP). The decapped intact mRNA was ligated with DNA-RNA linker including EcoR I site by treatment of T4 RNA ligase and the first strand cDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to

have about 60nt. The cDNA vector was circularized with E. coli DNA ligase after digestion of EcoRI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coli Top10F' by electroporation method. The cDNA libraries constructed by this method are full-length enriched cDNA library."

                     Site_2: SfiI; A complementary DNA (cDNA) library from
                     human erythroid precursor cells was constructed using
                     SMART PCR (polymerase chain reaction) cDNA Library
                     Construction Kit (Clontech, Palo Alto, CA) according to
                     the manufacturer's directions, but with slight
                     modifications. Briefly, reverse transcription was
                     performed in the presence of 1 umol/L peptide nucleic acid
                     (PNA) oligos
                     (N-terminal)-biotin-GTC-CAC-CCG-AAG-CTT-G-(C-terminal) and
                     (N-terminal)-biotin-C(T/C)T-GAA-GTT-CTC-AGG-A-(C-terminal)
                     . Synthesized cDNA was digested with SfiI and
                     size-selected on a 1% agarose gel (>800bp). Large-scale
                     sequencing of the library was performed by the NIH
                     Intramural Sequencing Center (NISC;
                     Http://www.nisc.nih.gov/)."

            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
            was normalized. Library was constructed by Life Technologies, a
            division of Invitrogen. This sequence belongs to sequence cluster
            3474.r
            For more information about this cluster, see

  TITLE     Full-length cDNA libraries and normalization
  JOURNAL   Unpublished (2001)
COMMENT     On May 15, 2003 this sequence version replaced gi:30780264.
            Contact: Genoscope
            Genoscope - Centre National de Sequencage
            2 rue Gaston Cremieux, CP 5706 - 91057 EVRY cedex - FRANCE
            Email: seqref@genoscope.cns.fr, Web : www.genoscope.cns.fr
            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 3474.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0DN005DG01QP1&c=3474.r.

PT New isolated nucleic acids and polypeptides capable of eliciting a
PT humoral and/or cellular immune response, useful for diagnosing,
PT preventing or treating cancer, particularly colon cancer.
XX
PS Claim 1; SEQ ID NO 826; 87pp; English.
XX
CC The invention relates to polynucleotide and polypeptide sequences
CC associated with cancer, particularly colon cancer. Also disclosed are (i)
CC an expression vector comprising the polynucleotide, (ii) a host cell
CC transformed or transfected with the expression vector, (iii) an isolated
CC antibody, or its antigen-binding fragment, which specifically binds to
CC the polypeptide, (iv) a method of detecting or determining the presence
CC of cancer in a patient, (v) a fusion protein comprising at least one of
CC the polypeptides, (vi) an oligonucleotide that hybridises to the
CC polynucleotide sequence under highly stringent conditions, and (vii) a
CC method of stimulating and/or expanding T cells specific for a tumour
CC protein. The polypeptide specifically comprises the amino acid sequence
CC of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
CC frames (ORFs) of C636S. These polypeptides are encoded by the
CC polynucleotide sequences, where both are capable of eliciting a humoral
CC and/or cellular immune response. The polynucleotides, polypeptides, and
CC antibodies are useful for diagnosing, preventing or treating cancer,
CC particularly colon cancer. The polynucleotide and polypeptide sequences
CC are also useful in DNA strand invasion, antisense inhibition, mutational
CC analysis, nucleic acid purification, isolation of transcriptionally
CC active genes, blocking or transcription factor binding, genome cleavage
CC or in situ hybridisation, and as enhancers of transcription or
CC biomarkers. This sequence represents a human colon cancer associated
CC cDNA. Note: The sequence data for this patent was obtained in electronic
CC format directly from the USPTO web site at seqdata.uspto.gov

PT New isolated prostate-derived nucleic acids - used to develop products
PT which may have cytokine, immune regulatory, haematopoiesis regulating,
PT anti-inflammatory or tumour inhibition activity.
XX
PS Claim 1; Page 298; 675pp; English.
XX
CC AAX40438 to AAX40715 represent 5' expressed sequence tags (ESTs) for
CC human secreted proteins expressed in prostate, and encode the proteins
CC given in AAY11716 to AAY11993 respectively. The proteins given represent
CC the signal peptide and an N-terminal fragment of a secreted protein. The
CC nucleic acid sequences can be used for producing secreted human gene
CC products. They can also be used to develop products for diagnosis and
CC therapy. The proteins obtained may have cytokine activity, cell
CC proliferation and differentiation activity, haematopoiesis regulating
CC activity, tissue growth regulating activity, reproductive hormone
CC regulating activity, chemotactic/chemokinetic activity, haemostatic and
CC thrombolytic activity, receptor/ligand activity, anti-inflammatory
CC activity, tumour inhibition activity or other activities. The products
CC can be used in forensic, gene therapy and chromosome mapping procedures.
CC The sequences can also be used for obtaining corresponding promoter
CC sequences. The nucleic acids encoding the signal peptides can be used for
CC directing extracellular secretion of a polypeptide or the insertion of a
CC polypeptide into a membrane, or importing a polypeptide into a cell

PT Primer sets for synthesizing polynucleotides, particularly the 5602 full-
PT length cDNAs defined in the specification, and for the detection and/or
PT diagnosis of the abnormality of the proteins encoded by the full-length
PT cDNAs.
XX
PS Claim 1; SEQ ID NO 4908; 2537pp + Sequence Listing; English.
XX
CC The present invention describes primer sets for synthesising 5602 full-
CC length cDNAs defined in the specification. Where a primer set comprises:
CC (a) an oligo-dT primer and an oligonucleotide complementary to the
CC complementary strand of a polynucleotide which comprises one of the 5602
CC nucleotide sequences defined in the specification, where the
CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC of an oligonucleotide comprising a sequence complementary to the
CC complementary strand of a polynucleotide which comprises a 5'-end
CC sequence and an oligonucleotide comprising a sequence complementary to a
CC polynucleotide which comprises a 3'-end sequence, where the
CC oligonucleotide comprises at least 15 nucleotides and the combination of
CC the 5'-end sequence/3'-end sequence is selected from those defined in the
CC specification. The primer sets can be used in antisense therapy and in
CC gene therapy. The primers are useful for synthesising polynucleotides,
CC particularly full-length cDNAs. The primers are also useful for the
CC detection and/or diagnosis of the abnormality of the proteins encoded by
CC the full-length cDNAs. The primers allow obtaining of the full-length
CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893
CC represent human amino acid sequences; and AAH13629 to AAH13632 represent
CC oligonucleotides, all of which are used in the exemplification of the
CC present invention

PT Colon cancer associated gene sequences, referred to as colon cancer
PT antigens, useful for the treatment, prevention, and diagnosis of colon
PT disorders such as colon cancer.
XX
PS Claim 1; Page 597; 2104pp; English.
XX
CC AAC97991 to AAC98763 encode the human colon cancer associated proteins,
CC called human colon cancer antigens, given in AAB53234 to AAB54006. The
CC human colon cancer antigens can have cytostatic, cardioactive, muscular;
CC neuroprotective, immunomodulatory, gynaecological, gastrointestinal,
CC vulnerary, nephrotropic, antiinfective and antibacterial activities, and
CC can be used in gene therapy. The colon cancer antigen polynucleotides,
CC proteins and antibodies to the proteins are useful for the prevention,
CC treatment and diagnosis of colon disorders, such as colon cancer. The
CC polynucleotides may be used in diagnostics and research, such as for
CC chromosome identification, and as hybridisation probes. The proteins may
CC also be used to prevent diseases such as neural disorders, immune system
CC disorders, muscular disorders, reproductive disorders, gastrointestinal
CC disorders, wounds, renal disorders, infectious diseases, and
CC cardiovascular disorders. AAC98764 to AAC98772 and AAB54007 represent

PT Primer sets for synthesizing polynucleotides, particularly the 5602 full-
PT length cDNAs defined in the specification, and for the detection and/or
PT diagnosis of the abnormality of the proteins encoded by the full-length
PT cDNAs.
XX
PS Claim 8; SEQ ID NO 13209; 2537pp + Sequence Listing; English.
XX
CC The present invention describes primer sets for synthesising 5602 full-
CC length cDNAs defined in the specification. Where a primer set comprises:
CC (a) an oligo-dT primer and an oligonucleotide complementary to the
CC complementary strand of a polynucleotide which comprises one of the 5602
CC nucleotide sequences defined in the specification, where the
CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC of an oligonucleotide comprising a sequence complementary to the
CC complementary strand of a polynucleotide which comprises a 5'-end
CC sequence and an oligonucleotide comprising a sequence complementary to a
CC polynucleotide which comprises a 3'-end sequence, where the
CC oligonucleotide comprises at least 15 nucleotides and the combination of
CC the 5'-end sequence/3'-end sequence is selected from those defined in the
CC specification. The primer sets can be used in antisense therapy and in
CC gene therapy. The primers are useful for synthesising polynucleotides,
CC particularly full-length cDNAs. The primers are also useful for the
CC detection and/or diagnosis of the abnormality of the proteins encoded by
CC the full-length cDNAs. The primers allow obtaining of the full-length
CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893
CC represent human amino acid sequences; and AAH13629 to AAH13632 represent
CC oligonucleotides, all of which are used in the exemplification of the

CC present invention

PT Novel proteins used to treat inflammatory diseases, NF-kappaB related
PT diseases and for improvement of anti-tumor treatments.
XX
PS Claim 9; Page 37-39; 48pp; English.
XX
CC This sequence represents the gene encoding human CD40 receptor associated
CC protein (CRAP). CRAP is a functional protein capable of interacting with
CC the cytoplasmic domain of CD40 and/or other receptors of the tumour
CC necrosis factor (TNF) receptor superfamily such as CD30 and TNF receptor
CC I, where the protein has no homology to TNF receptor associated factor
CC (TRAF)-proteins. The CD40 binding proteins can be used as modulators of
CC the CD40 signalling pathway, especially to diagnose and treat TRAF-
CC related, CD40-related, NF-kappaB related and/or Jun (kinase)-related
CC diseases, and for the improvement of anti-tumour diseases. Diseases which
CC may be treated include atherosclerosis, arthritis, multiple sclerosis,
CC systemic lupus erythematosus, graft rejection, graft versus host disease,
CC allergy, and autoimmune disease. The proteins can be used to sensitize
CC tumour cells to anti-tumour treatments and to screen for compounds which
CC interfere with the interaction of the proteins with other protein
CC components of the TRAF, CD40 or NF-kappaB related pathway

CC This invention relates to novel human genes and gene product which are
CC implicated in certain disease states. Compounds which modulate the
CC proteins of the invention may have cytostatic, antiinflammatory,
CC ophthalmological, antiarteriosclerotic or vulnerary activities. The
CC sequences of the invention may be useful for gene therapy. The invention
CC may be useful for diagnosing or treating a hypoxia-regulated condition,
CC such as tumourigenesis, angiogenesis, apoptosis, inflammation,
CC erythropoiesis, or the biological response to hypoxia conditions
CC including processes such as glycolysis, gluconeogenesis, glucose
CC transportation, catecholamine synthesis, iron transport or nitric oxide
CC synthesis. The disease includes cancer, ischaemic conditions, reperfusion

CC injury, retinopathy, neonatal stress, pre-eclampsia, atherosclerosis,
CC inflammatory conditions or wound healing. The present sequence is that of
CC a disease related protein encoding DNA sequence of the invention.

PS Claim 1; SEQ ID NO 475; 2940pp; English.
XX
CC The invention relates to a novel isolated nucleic acid and the PRO
CC polypeptide encoded by it. A protein of the invention has
CC antiinflammatory, antiarthritic, antirheumatic, immunosuppressive,
CC osteopathic, antidiabetic, dermatological, antipsoriatic, antiallergic,
CC antiasthmatic, hepatotropic, and respiratory activity. A polynucleotide
CC of the invention may have a use in gene therapy. The PRO polypeptide, its
CC agonist, antagonist, or antibody that specifically binds to the
CC polypeptide is useful for treating an immune related disorder such as
CC systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis,
CC juvenile chronic arthritis, a spondyloarthropathy, systemic sclerosis, an
CC idiopathic inflammatory myopathy, Sjogren's syndrome, systemic
CC vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune
CC thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal
CC disease, a demyelinating disease of the central or peripheral nervous
CC system, idiopathic demyelinating polyneuropathy, Guillain-Barre syndrome,

PT Biomarkers useful for predicting or determining the response of a mammal
PT to a cancer treatment comprising administration of a modulator of cyclin-
PT dependent kinase activity.
XX
PS Claim 5; SEQ ID NO 921; 141pp; English.
XX
CC This invention describes a novel method of predicting or determining
CC whether a mammal will respond or is responding to an anti-cancer agent
CC that modulates cyclin-dependent kinase (cdk) activity. The method
CC comprises measuring the level of one or more biomarkers selected from
CC 2774 biomarkers given in the specification (nucleotide sequence SEQ ID
CC NO:1246 (Genbank EST W28729) is especially preferred). The method of the
CC invention is utilized in a kit for determining or predicting whether

```
CC   patient would be susceptible or resistant to treatment by an agent
CC   modulating cdk activity. The invention also describes a method for
CC   utilizing individualized genetic profiles for treating diseases and
CC   disorders based on patient's response and molecular level, specialized
CC   microarrays comprising the biomarkers described, antibodies directed
CC   against the biomarkers and a cell culture model to identify biomarkers.
CC   The cdk modulator is preferably N-5-[[5-(1,1-Dimethylethyl)-2-
CC   oxazolyl]methyl]thio]-2-thiazolyl-4-piperidine carboxamide, 0.5-L-
CC   tartaric acid salt. Note: The sequence data for this patent did not form
CC   part of the printed specification, but was obtained in electronic format
CC   directly from WIPO at ftp.wipo.int/pub/published_pct_sequences. This
CC   sequence encodes a biomarker used in the method of the invention.

XX
CC The invention describes an isolated polynucleotide (I) comprising a fully
CC defined (S1) of 749, 3188, 2484, 1169, 2936, 1467, 5773, 5714, 4041,
CC 1372, 3996, 3945, 2735, 1788, 585, 1782, 927, 5714 or 2282 nucleotides as
CC given in the specification, its translated or protein coding portion, its
CC extracellular portion or its active domain. The GPCR-like polypeptides
CC and polynucleotides are useful for the treatment of diseases of
CC ophthalmic, neurological, immunological and nephritic systems. They may
CC also be used to treat hormonal dysfunction, cancer, atherosclerosis and
CC diabetes. The antibodies are useful for detecting or quantitating the
CC polypeptide in tissue. The polypeptides can also be used as molecular
CC weight markers and as a food supplement. This sequence represents a human
CC polynucleotide of the invention.

PT Novel nucleic acids and polypeptides, useful for treating disorders such
PT as central nervous system injuries.
XX
PS Claim 1; SEQ ID NO 4772; 10078pp; English.
XX

CC The invention relates to human nucleic acids (AAI57798-AAI61369) and the
CC encoded polypeptides (AAM38642-AAM42213) with nootropic,
CC immunosuppressant and cytostatic activity. The polynucleotides are useful
CC in gene therapy. A composition containing a polypeptide or polynucleotide
CC of the invention may be used to treat diseases of the peripheral nervous
CC system, such as peripheral nervous injuries, peripheral neuropathy and
CC localised neuropathies and central nervous system diseases, such as
CC Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic
CC lateral sclerosis, and Shy-Drager Syndrome. Other uses include the
CC utilisation of the activities such as: Immune system suppression,
CC Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic
CC and thrombolytic activity, cancer diagnosis and therapy, drug screening,
CC assays for receptor activity, arthritis and inflammation, leukaemias and
CC C.N.S disorders. Note: The sequence data for this patent did not form
CC part of the printed specification

PT New combination comprising cDNAs that are differentially expressed in
PT colon disorder, useful for diagnosing, treating, staging or monitoring
PT treatment for colon cancers.
XX
PS Claim 1; SEQ ID NO 88; 231pp; English.
XX
CC The invention relates to a combination comprising cDNAs that are
CC differentially expressed in colon disorder. The methods and compositions
CC of the present invention are useful for diagnosing, treating, staging or
CC monitoring treatment for colon cancer. They are also useful in high
CC throughput methods for using cDNAs to detect differential expression of
CC nucleic acids in a sample, screening molecules or compounds to identify a
CC ligand which specifically binds a cDNA and using a protein to screen
CC molecules or compounds to identify at least one ligand which specifically
CC binds the protein. The present sequence represents a human cDNA
CC differentially expressed in colon cancer.

PT expression, useful in treating an animal having a disease or condition,
PT i.e. hyperproliferative disorder.
XX
PS Example 15; SEQ ID NO 11; 121pp; English.
XX
CC The invention describes a compound targeted to a nucleic acid molecule
CC encoding endothelial differentiation gene 2. The compound, 8-80
CC nucleobases in length, is targeted to a nucleic acid molecule encoding
CC endothelial differentiation gene 2, where the compound specifically
CC hybridises with the nucleic acid molecule encoding the endothelial
CC differentiation gene 2 comprising a sequence of 1576 bp (SEQ ID NO: 4)
CC and inhibits the expression of endothelial differentiation gene 2. Also
CC described are: a method of inhibiting the expression of the endothelial
CC differentiation gene 2 in cells or tissues; a method of screening for a
CC modulator of endothelial differentiation gene 2; a diagnostic method for
CC identifying a disease state; a kit or assay device comprising the
CC compound; and treating an animal having a disease or condition associated
CC with endothelial differentiation gene 2 compound so that expression of
CC endothelial differentiation gene 2 is inhibited. The compound and the
CC methods are useful in treating an animal having a disease or condition,
CC i.e. hyperproliferative disorder. This sequence represents a human
CC endothelial differentiation gene 2 related polynucleotide.

XX
PI Rosen CA, Barash SC, Ruben SM;
XX
DR WPI; 2001-465569/50.
XX
PT Isolated nucleic acid molecule encoding excretory system antigen is used
PT in preventing, treating or ameliorating a medical condition.
XX
PS Example 2; SEQ ID NO 977; 574pp + Sequence Listing; English.
XX
CC The invention relates to novel excretory system related human
CC polynucleotides (AAI98567-AAI99503) and the encoded proteins (AAM99594-
CC AAM99913) useful for preventing, treating or ameliorating medical
CC conditions e.g. by protein or gene therapy, espeically disorders related
CC to the excretory system. The genes are isolated from a range of human
CC tissues disclosed in the specification. The nucleic acids, proteins,
CC antibodies and (ant)agonists are useful in the diagnosis, treatment and
CC prevention of: (a) cancer, e.g. breast and ovarian cancer and other
CC cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal
CC tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's
CC disease, allergies, autoimmune haemolytic anaemia, autoimmune
CC thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis,
CC rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders
CC such as myocardial ischaemias; (d) wound healing; (e) neurological
CC diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases
CC such as viral, bacterial, fungal and parasitic infections. Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

DR WPI; 2001-488784/53.
XX
PT New isolated nucleic acids and polypeptides, useful for diagnosing,
PT treating and/or preventing human diseases and disorders.
XX
PS Disclosure; SEQ ID NO 878; 564pp + Sequence Listing; English.
XX
CC The invention relates to novel kidney related polynucleotides (AAI62971-
CC AAI63793) and the encoded polypeptides (AAM42417-AAM42691) collectively
CC known as kidney antigens and the use of such kidney antigens for
CC detecting disorders of the kidney, especially kidney cancer and kidney
CC cancer metastases. The polynucleotides and proteins are also useful for
CC preventing, treating or ameliorating medical conditions e.g. by protein
CC or gene therapy. The genes are isolated from a range of human tissues
CC disclosed in the specification. The nucleic acids, proteins, antibodies
CC and (ant)agonists are useful in the diagnosis, treatment and prevention
CC of: (a) cancer, e.g. breast and ovarian cancer, and other cancers of the
CC adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver,
CC lung, or urogenital; (b) immune disorders e.g. Addison's disease,
CC allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis,
CC diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid
CC arthritis and ulcerative colitis; (c) cardiovascular disorders such as
CC myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g.
CC cerebral anoxia and epilepsy; and (f) infectious diseases such as viral,
CC bacterial, fungal and parasitic infections. Note: The sequence data for
CC this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PS   Disclosure; SEQ ID NO 877; 564pp + Sequence Listing; English.
XX
CC   The invention relates to novel kidney related polynucleotides (AAI62971-
CC   AAI63793) and the encoded polypeptides (AAM42417-AAM42691) collectively
CC   known as kidney antigens and the use of such kidney antigens for
CC   detecting disorders of the kidney, especially kidney cancer and kidney
CC   cancer metastases. The polynucleotides and proteins are also useful for
CC   preventing, treating or ameliorating medical conditions e.g. by protein
CC   or gene therapy. The genes are isolated from a range of human tissues
CC   disclosed in the specification. The nucleic acids, proteins, antibodies
CC   and (ant)agonists are useful in the diagnosis, treatment and prevention
CC   of: (a) cancer, e.g. breast and ovarian cancer, and other cancers of the
CC   adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver,
CC   lung, or urogenital; (b) immune disorders e.g. Addison's disease,
CC   allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis,
CC   diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid
CC   arthritis and ulcerative colitis; (c) cardiovascular disorders such as
CC   myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g.
CC   cerebral anoxia and epilepsy; and (f) infectious diseases such as viral,
CC   bacterial, fungal and parasitic infections. Note: The sequence data for
CC   this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   New stress-responsive nucleic acid, useful for altering the
PT   responsiveness of a plant, e.g. cereal, to an abiotic stress such as cold
PT   stress, salt stress or osmotic stress.
XX
PS   Claim 48; SEQ ID NO 15051; 89pp; English.
XX
CC   The invention relates to novel abiotic stress responsive polynucleotides
CC   and polypeptides. Also disclosed are vectors, expression cassettes, host
CC   cells, and plants containing such polynucleotides. Also disclosed are
CC   methods for using the polynucleotides and polypeptides to alter the
CC   responsiveness of a plant to abiotic stress. The invention is useful in
CC   agriculture. The nucleic acid is useful for determining whether a test
CC   plant has been exposed to an abiotic stress condition. It is also useful
CC   for selecting an agent that alters abiotic stress regulated
CC   polynucleotide expression in a plant cell, and to identify a homolog or
CC   ortholog to an abiotic stress responsive polynucleotide. The nucleic acid
CC   molecule and the polypeptide encoded by it are useful in altering the
CC   responsiveness of a plant to an abiotic stress, such as cold stress, salt
CC   stress, osmotic stress or any of their combinations. The present sequence
CC   is used in the exemplification of the invention

PT New rice promoter, useful for manipulating crop plants to alter or
PT improve phenotypic characteristics, e.g. produce large quantities of oil
PT or proteins, resistance to insecticides, virus or fungi, stress tolerance
PT or high nutritional value.
XX
PS Claim 1; SEQ ID NO 2437; 230pp; English.
XX
CC The invention relates to plant nucleotide sequences that direct seed-,
CC leaf- and/or stem-, panicle-, root- or pollen-specific or -preferential
CC or constitutive transcription of an operatively linked nucleic acid
CC segment. The invention also relates to a method for augmenting a plant
CC genome and a method of identifying a gene, where its expression is
CC altered in the seed, leaf, stem, panicle, pollen, root or is constitutive
CC in a plant cell. The plant is a cereal, e.g. soybean, alfalfa, sunflower,
CC canola, cotton, peanut, tobacco or sugar beet, preferably maize, barley,
CC sorghum, rice or wheat. The polynucleotides and the polypeptides they
CC encode are useful for manipulating crop plants to alter or improve
CC phenotypic characteristics, to produce large quantities of oil or
CC proteins, to incur resistance to insecticides, viruses or fungi, and to
CC incur stress tolerance (e.g. salt, cold or drought) to ensure the plants
CC have a high nutritional value with reduced apical dominance or dwarfism,
CC early flowering or altered metabolic pathways. This sequence represents a
CC plant nucleic acid of the invention. Note: The sequence data for this
CC patent did not form part of the printed specification but was obtained in
CC electronic format directly from USPTO at seqdata.uspto.gov/sequence.html.

PS Claim 3; Page 997; 2745pp; English.
XX
CC AAZ65654 to AAZ69578 represent human biallelic markers from the present
CC invention, which contain a polymorphic base at position 24 of their
CC nucleotide sequences. AAZ69579 to AAZ77440 represent amplification
CC primers for the biallelic markers. The biallelic markers of the invention
CC have a variety of uses: they can be used for high density mapping of the
CC human genome, and in complex association studies and haplotyping studies
CC which are useful in determining the genetic basis for disease states.
CC Compositions and methods of the invention can also be useful for the
CC identification of the targets for the development of pharmaceutical
CC agents and diagnostic methods, as well as the characterisation of the
CC differential efficacious responses to and side effects from
CC pharmaceutical agents acting on a disease as well as other treatment.

PT   Human genome-derived single exon nucleic acid probes useful for analyzing
PT   gene expression in human cervical epithelial cells.
XX
PS   Claim 25; SEQ ID NO 15217; 487pp; English.
XX
CC   The present invention relates to human single exon nucleic acid probes
CC   (SENP). The present sequence is one such probe. The SENPs are derived
CC   from human HeLa cells. The SENPs can be used to produce a single exon
CC   microarray, which can be used for measuring human gene expression in a
CC   sample derived from human cervical epithelial cells. By measuring gene
CC   expression, the probes are therefore useful in grading and/or staging of
CC   diseases of the cervix, notably cervical cancer. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from WIPO at

PT Single exon nucleic acid probes for analyzing gene expression in human
PT hearts.
XX
PS Claim 4; SEQ ID NO 15980; 530pp; English.
XX
CC The present invention relates to single exon nucleic acid probes for
CC measuring human gene expression in a sample derived from human heart. The
CC present sequence is one such probe. The probes may be used for
CC predicting, measuring and displaying gene expression in samples derived
CC from the human heart via microarrays. By measuring gene expression, the
CC probes are useful for predicting, diagnosing, grading, staging,
CC monitoring and prognosing diseases of the human heart and vascular system
CC e.g. cardiovascular disease, hypertension, cardiac arrhythmias and
CC congenital heart disease. Note: The sequence data for this patent did not
CC form part of the printed specification, but was obtained in electronic
CC format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT Human genome-derived single exon nucleic acid probes useful for analyzing
PT gene expression in human adult liver.
XX
PS Claim 4; SEQ ID NO 20155; 658pp; English.
XX
CC The invention relates to a single exon nucleic acid probe (SENP) (I) for
CC measuring human gene expression in a sample derived from human adult
CC liver, comprising one of 13109 defined nucleotide sequences given in the
CC specification (or complements/ fragments). The probe hybridises at high
CC stringency to a nucleic acid molecule expressed in the human adult liver.
CC (I) may be used for predicting, measuring and displaying gene expression
CC in samples derived from human adult liver. The genes identified may be
CC involved in genetic liver diseases such as cirrhosis,
CC hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is
CC associated with coronary heart disease. ABS25011-ABS51005 represent human
CC liver single exon nucleic acid probes of the invention. Note: The
CC sequence information for this patent does not appear in the printed
CC specification but was obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT   Spatially-addressable set of single exon nucleic acid probes, used to
PT   measure gene expression in human lung samples.
XX
PS   Claim 4; SEQ ID NO 19738; 634pp; English.
XX
CC   The invention relates to a spatially-addressable set of single exon
CC   nucleic acid probes for measuring gene expression in a sample derived
CC   from human lung comprising single exon nucleic acid probes having one of
CC   12614 nucleic acid sequences mentioned in the specification, or their
CC   complements or the 12387 open reading frames derived from the 12614
CC   probes. Also included are a microarray comprising the novel set of probes
CC   ; the novel set of probes which hybridise at high stringency to a nucleic
CC   acid expressed in the human lung; measuring gene expression in a sample
CC   derived from human lung, comprising (a) contacting the array with a
CC   collection of detectably labeled nucleic acids derived from human lung
CC   mRNA, and (b) measuring the label detectably bound to each probe of the
CC   array; identifying exons in a eukaryotic genome, comprising (a)
CC   algorithmically predicting at least one exon from genomic sequences of
CC   the eukaryote; and (b) detecting specific hybridisation of detectably
CC   labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,
CC   having a fragment identical to the predicted exon, the probe is included
CC   in the above mentioned microarray; assigning exons to a single gene,
CC   comprising (a) identifying exons from genomic sequence by the method
CC   above and (b) measuring the expression of each of the exons in several
CC   tissues and/or cell types using hybridisation to a single exon
CC   microarrays having a probe with the exon, where a common pattern of
CC   expression of the exons in the tissues and/or cell types indicates that
CC   the exons should be assigned to a single gene; a peptide comprising one
CC   of 12011 sequences, mentioned in the specification, or encoded by the
CC   probes/open reading frames (ORF). The probes are used for gene expression
CC   analysis, and for identifying exons in a gene, particularly using human
CC   lung derived mRNA and for the study of lung diseases such as asthma, lung
CC   cancer, chronic obstructive pulmonary disease (COPD), interstitial lung
CC   disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis,
CC   tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-
CC   Pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary
CC   histiocytosis, lymphangioleiomyomtosis, pulmonary alveolar proteinosis,
CC   Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary
CC   dyskinesis, pulmonary hypertension and hyaline membrane disease. The
CC   present sequence is a single exon probe open reading frame of the
CC   invention. Note: The sequence data for this patent did not form part of
CC   the printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   diagnostic, forensic, gene therapy and chromosome mapping procedures.
XX
PS   Claim 1; SEQ ID NO 35251; 71pp + Sequence Listing; English.
XX
CC   The present sequence is one of a large number of 5' ESTs derived from
CC   mRNAs encoding secreted proteins. No ORF has yet been conclusively
CC   identified within the present sequence. The 5' ESTs were prepared from
CC   total human RNAs or polyA+ RNAs derived from 30 different tissues. EST
CC   sequences usually correspond mainly to the 3' untranslated region (UTR)
```

CC of the mRNA because they are often obtained from oligo-dT primed cDNA
CC libraries. Such ESTs are not well suited for isolating cDNA sequences
CC derived from the 5' ends of mRNAs and even in those cases where longer
CC cDNA sequences have been obtained, the full 5' UTR is rarely included. 5'
CC ESTs are derived from mRNAs with intact 5' ends and can therefore be used
CC to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in
CC diagnostic, forensic, gene therapy and chromosome mapping procedures.
CC They are used to obtain upstream regulatory sequences and to design
CC expression and secretion vectors

PT Library of polynucleotides for diagnosing a cancerous state of a
PT mammalian cell and detecting cancer, particularly of the colon or
PT prostate, comprises 3351 human polynucleotide sequences.
XX
PS Claim 9; Page 864; 1046pp; English.
XX
CC The present sequence is one of 3351 sequences in a library of human
CC polynucleotides. The library is used to detect differentially expressed
CC genes correlated with a cancerous state of a mammalian cell and can
CC detect colon, prostate, breast and lung cancer. The library can be used
CC to produce probes for detection of mRNA and to produce additional copies
CC of the polynucleotides. The probes can be used for chromosome mapping of
CC the polynucleotide and for detection of transcription levels. Ribozymes
CC or antisense oligonucleotides can be generated. The polynucleotides and
CC their gene products are used as genetic or biochemical markers (e.g. in
CC blood or tissues) that will detect the earliest changes along the
CC carcinogenesis pathway and/or monitor the efficacy of therapies and
CC preventive interventions. The polynucleotides, polypeptides and
CC antibodies against them can be used in pharmaceutical compositions to
CC treat the cancers and proliferative disorders such as neoplasia,
CC dysplasia and hyperplasia

PT expressed genes correlated with a cancerous state of a mammalian cell,
PT and inhibiting tumor growth.
XX
PS Claim 1; SEQ ID NO 4146; 883pp + Sequence Listing; English.
XX
CC The invention relates to an isolated polynucleotide (ABN27253-ABN33262)
CC with cytostatic activity. The polynucleotide is used to produce a
CC polypeptide, to detect differentially expressed genes correlated with a
CC cancerous state of a mammalian cell and to inhibit tumour growth. The
CC polynucleotide is used as a probe in mapping and tissue profiling. The
CC encoded polypeptide and antibodies to the polypeptide can also be used
CC for therapeutic and diagnostic purposes. The polynucleotide is useful for
CC gene therapy. Note: The sequence data for this patent did not form part
CC of the printed specification, but was obtained in electronic format
CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   New isolated polynucleotides, which are differentially expressed in colon
PT   cancer cell, useful for treating cancer, e.g. colon cancer, breast
PT   cancer, or pancreatic cancer.
XX
PS   Claim 1; SEQ ID NO 4094; 97pp; English.
XX
CC   The invention relates to 9672 polynucleotides (ACL53866-ACL63537) which
CC   are differentially expressed in colon cancer cells. The invention also
CC   relates to vectors and host cells comprising a differentially expressed
CC   polynucleotide of the invention; a method for detecting a cancerous cell
CC   by detection of a gene product of the polynucleotides; a method for
CC   inhibiting a cancerous phenotype of a cell by inhibiting a gene product
CC   of the polynucleotides; a method of treating an individual with cancer by
CC   administration of a modulator of a gene product of the polynucleotides;
CC   and an isolated antibody that specifically binds to a polypeptide encoded
CC   by one of the 9672 polynucleotides. The polynucleotides, polypeptides,
CC   antibodies, and methods are useful for the detection of cancerous cells;
CC   for the diagnosis, prognosis and management of cancer; for the
CC   identification of agents that modulate the phenotype of cancerous cells;
CC   for the identification of therapeutic targets for cancer chemotherapy;
CC   and for the treatment of cancer, especially colon cancer and metastasized
CC   colon cancer, but also breast or pancreatic cancer. The polynucleotides
CC   are also useful as a source of probes or primers for use in diagnostic
CC   methods. The differentially expressed polynucleotides or their encoded
CC   proteins can additionally be used as vaccines to modulate primary immune
CC   responses for the prevention or treatment of cancer. The present sequence
CC   represents a specifically claimed polynucleotide which is differentially
CC   expressed in colon cancer. Note: The sequence data for this patent did
CC   not form part of the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT New polynucleotides and polypeptides for diagnosing, treating, preventing
PT or prognosing e.g. diseases or disorders of the nervous, musculoskeletal,
PT excretory, gastrointestinal, reproductive, and respiratory systems.
XX
PS Claim 1; SEQ ID NO 689; 642pp; English.
XX
CC The invention relates to novel nucleic acids encoding novel human foetal
CC antigens. The nucleic acids and proteins are used to prevent, treat (e.g.
CC by gene therapy) or ameliorate a medical condition in e.g. humans, mice,
CC rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used
CC in diagnosing a pathological condition or susceptibility to a
CC pathological condition. The antibodies to the antigens can also be used
CC in alleviating symptoms associated with the disorders and in diagnostic
CC immunoassays e.g. radioimmunoassays or enzyme linked immunosorbent assays
CC (ELISA). Disorders which are diagnosed or treated include autoimmune
CC diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g.
CC neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac
CC arrest, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis,
CC nervous system disorders e.g. Alzheimer's disease, infections caused by
CC bacteria, viruses and fungi and ocular disorders e.g. corneal infection.
CC The polypeptides can also be used to aid wound healing and epithelial
CC cell proliferation, to prevent skin aging due to sunburn, to maintain
CC organs before transplantation, for supporting cell culture of primary
CC tissues, to regenerate tissues and in chemotaxis. The polypeptides can
CC also be used as a food additive or preservative to increase or decrease
CC storage capabilities, fat content, lipid, protein, carbohydrate,
CC vitamins, minerals, cofactors and other nutritional components. Numerous

CC examples of diseases and disorders treated by the nucleic acids and
CC proteins are given in the specification. The present sequence encodes a
CC foetal antigen of the invention. Note: The sequence data for this patent
CC did not form part of the printed specification, but was obtained in

PT Determining whether agent has defined biological activity, by making
PT comparison e.g. comparing efficacy value, toxicity value and classifier
PT value of agent to reference values, and using results to determine
PT whether agent has activity.
XX
PS Example 4; SEQ ID NO 2753; 51pp; English.
XX
CC The present invention relates to a methods for screening biologically
CC active agents, such as candidate drugs, to determine whether the agent
CC possesses a defined biological activity. The methods involve making one
CC or more comparisons chosen from comparing efficacy value of agent to
CC reference efficacy value, comparing a toxicity value of the agent to
CC reference toxicity value, comparing a classifier value of the agent to
CC reference classifier value, and using the comparison result(s) to
CC determine whether the agent possesses the defined biological activity.
CC Also claimed is a population of oligonucleotide probes (I) specific for
CC measuring the expression levels of members of a classifier population of
CC genes or a toxicity-related population of genes. (I) are useful for
CC measuring the expression levels of genes that are useful for identifying
CC agonists or partial agonists of Peroxisome Proliferator-Activated
CC Receptor (PPAR) gamma. ADZ63072-ADZ63959 are oligonucleotide probes which
CC are useful in the method of the invention to measure the expression
CC pattern of mouse genes ADZ62273-ADZ63071 that yield an expression pattern
CC that correlates with the stimulation of PPARalpha receptors by an agent.
CC Note: The sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from USPTO
CC at seqdata.uspto.gov/sequence.html?DocID=20050084872.

XX
CC The invention relates to 446 newly isolated polynucleotide sequences. The
CC activity of polynucleotides of the invention may be described as,
CC vulnerary, neuroprotective, immunomodulator, cytostatic and anti-
CC inflammatory. Compositions comprising nucleic acids of the invention are
CC useful for treating a mammalian subject, or as nutritional sources or
CC supplements. These are useful in gene therapy, particularly for treating
CC wounds, burns or ulcers, Alzheimer's disease, Huntington's disease,

```
CC   amyotrophic lateral sclerosis, autoimmune disorders, cancer or
CC   inflammation. The nucleic acids and polypeptides are also useful in
CC   diagnostic and research methods. The sequences given in records ABQ60788-
CC   ABQ61233 represent polynucleotides of the invention. NOTE: The sequence
CC   data for this patent did not form part of the printed specification, but
CC   was obtained in electronic format directly from WIPO at

PT   (e.g. AIDS, allergy or anemia), multiple sclerosis, osteoarthritis,
PT   cancer or hepatitis.
XX
PS   Claim 5; Page 186-187; 199pp; English.
XX
CC   The invention relates to an isolated polypeptide, which is a human kinase
CC   and phosphatase, KPP (KPP-1 to KPP-18). Also included are the encoding
CC   polynucleotides KPP NA, recombinant polynucleotide comprising a promoter
CC   sequence operably linked to KPP NA, a cell transformed with the
CC   recombinant polynucleotide, a transgenic organism comprising the
CC   recombinant polynucleotide;, an anti-KPP antibody, screening for
CC   ant/agonists of KPP, screening for compounds which bind to or alter the
CC   activity or expression of KPP, microarray where at least one element is
CC   KPP NA, generating an expression profile of a sample containing
CC   polynucleotides and an array comprising different nucleotide molecules
CC   affixed in distinct physical locations on a solid substrate (where at
CC   least one of the nucleotide molecules comprises a first oligonucleotide
CC   or polynucleotide sequence specifically hybridisable with at least 30
CC   contiguous nucleotides of a target KPP NA). The kinases and phosphatases
CC   (KPP) polypeptides, polynucleotides, agonists and antagonists are useful
CC   for diagnosing, treating or preventing disorders associated with aberrant
CC   expression of KPP, particularly cell proliferative disorders (e.g.
CC   arteriosclerosis, atherosclerosis, cirrhosis, hepatitis, paroxysmal
CC   nocturnal haemoglobinuria, polycythaemia vera, psoriasis, primary
CC   thromobocytopaenia or cancer), developmental disorders (renal tubular
CC   acidosis, anaemia or mental retardation), neurological disorders (e.g.
CC   Alzheimer's disease, Parkinson's disease or epilepsy), autoimmune/
CC   inflammatory disorders (e.g. AIDS, acquired immunodeficiency syndrome,
CC   allergies, asthma, autoimmune thyroiditis, contact dermatitis, Crohn's
CC   disease, diabetes mellitus, glomerulonephritis, Goodpasture's syndrome,
CC   gout, Graves' disease, Hashimoto's thyroiditis, irritable bowel syndrome,
CC   multiple sclerosis, osteoarthritis, osteoporosis, pancreatitis, Reiter's
CC   syndrome, rheumatoid arthritis, Sjogren's syndrome, uveitis), or viral,
CC   bacterial, fungal, parasitic, protozoan or helminthic infections. They
CC   are also useful in the assessment of the effects of exogenous compounds
CC   on the expression of nucleic acid and aa sequences of proteins associated
CC   with KPP. The polynucleotides encoding KPP are useful for creating
CC   transgenic animals to model human disease. The present sequence encodes a
CC   KPP protein of the invention

PT Kit for diagnozing and treating T-cell associated diseases e.g.
PT autoimmune, degenerative nervous system and infectious disease, comprises
PT nucleic acid primers specifically priming and allowing amplification of a
PT Vbeta gene.
XX
PS Disclosure; SEQ ID NO 257; 164pp; English.
XX
CC The invention relates to a kit for diagnosing and treating T-cell
CC associated diseases which comprises a panel of nucleic acid primers
CC specifically priming and allowing amplification of each Vbeta gene,
CC VbetaRNA or cDNA. The kit is useful for diagnosing organ transplant
CC rejection and diagnosing and treating T-cell associated diseases
CC including autoimmune diseases, degenerative nervous system diseases,
CC graft versus host disease, hypersensitivity diseases, infectious diseases
CC and neoplastic diseases. Autoimmune diseases include Addison's disease,
CC atrophic gastritis. Degenerative nervous system diseases include multiple
CC sclerosis and Alzheimer's disease. Hypersensitivity diseases include Type
CC I hypersensitivities such as contact with allergens that lead to
CC allergies, Type II hypersensitivities such as those present in
CC Goodpasture's syndrome and Type IV hypersensitivities such as those
CC manifested in leprosy. Infectious diseases include viral infections
CC caused by viruses such as HIV, fungal infections such as those caused by
CC the yeast genus Candida, parasitic infections such as those caused by
CC schistosomes, filaria and bacterial infections such as those caused by
CC Mycobacterium. Neoplastic diseases include lymphoproliferative diseases
CC such as leukaemias, lymphomas and cancers such as cancer of the brain,
CC breast. The present sequence represents a Vbeta gene family genomic
CC sequence.

PT   New recombinant DNA constructs useful in the field of biochemistry and
PT   genetics, and in particular for producing transgenic plants with improved
PT   biological characteristics.
XX
PS   Claim 1; SEQ ID NO 3246; 14pp; English.
XX
CC   The invention relates a recombinant DNA construct comprising a
CC   polynucleotide having any of 5544 nucleotide sequences (cDNAs SEQ ID NO:
CC   1-5544) and encoding a polypeptide with any of 5544 amino acid sequences
CC   (SEQ ID NO: 5545-11088). The cDNAs and proteins are from corn, soybean,
CC   Arabidopsis, wheat and rape but the specification does not indicate which
CC   sequences is derived from which organism. Also included is a method of
CC   producing a plant having an improved property, comprising transforming a
CC   plant with a recombinant DNA construct comprising a promoter region
CC   functional in a plant cell operably joined to a polynucleotide encoding a
CC   polypeptide associated with the property, and growing the transformed
CC   plant. The property is selected from improving plant cold tolerance, for
CC   manipulating growth rate in plant cells by modification of the cell cycle
CC   pathway, for improving plant drought tolerance, for providing increased
CC   resistance to plant disease, for galactomannan production, for production
CC   of plant growth regulators, for improving plant heat tolerance, for
CC   improving plant tolerance to herbicides, for increasing the rate of
CC   homologous recombination in plants, for lignin production, for improving
CC   plant tolerance to extreme osmotic conditions, for improving plant
CC   tolerance to pathogens or pests, for yield improvement by modification of
CC   photosynthesis, for modifying seed oil yield and/or content, for
CC   modifying seed protein yield and/or content, for yield improvement by
CC   modification of carbohydrate, nitrogen or phosphorus use and/or uptake
CC   and for yield improvement by providing improved plant growth and
CC   development under at least one stress condition. The polynucleotide may
CC   also encode a plant transcription factor. The methods and compositions of
CC   the present invention are useful in the field of biochemistry and
CC   genetics, in particular for producing transgenic plants with improved
CC   biological characteristics such as increased yield, improved nitrogen
CC   flow, increasing plant tolerance to cold or heat, improving plant
CC   tolerance to extreme osmotic and drought conditions, and improving plant
CC   tolerance to plant pests or pathogens. They can also be used in physical
CC   arrays of molecules, plant breeding markers, computer-based storage and
CC   analysis systems. The present sequence is one of the 5544 plant cDNA
CC   sequences of the invention. Note: The sequence data for this patent did
```

```
CC   not form part of the printed specification, but was obtained in
CC   electronic format directly from USPTO at
CC   seqdata.uspto.gov/sequence.html?DocID=20040216190.

PT   encoding it, useful for treating e.g. dementia, facial paralysis.
XX
PS   Claim 6; SEQ ID NO 1; 31pp; Chinese.
XX
CC   The invention relates to a human macroprotein designated 24.97. Further
CC   disclosed is the polynucleotide encoding the, a process for preparing the
CC   polypeptide by DNA recombination and the application of the polypeptide
CC   in treating diseases e.g. dementia, facial paralysis. The antagonist of
CC   the polypeptide and its medical action, and the application of the
CC   polynucleotide are also disclosed. The current sequence represents the
CC   human macroprotein 24.97 encoding cDNA.

PT   New polynucleotides and polypeptides, useful for developing a diagnostic
PT   marker or medicines for regulation of their expression and activity, or
PT   as targets of gene therapy.
XX
PS   Claim 1; Page; 222pp; English.
XX
CC   The invention discloses a polynucleotide comprising a sequence selected
CC   from 1970 fully defined nucleotide sequences which encode novel
CC   polypeptides. Also claimed is a polypeptide encoded by the polynucleotide
CC   or its partial peptide, an antibody binding to the polypeptide or peptide
CC   of the polynucleotide, immunologically assaying the polypeptide or
CC   peptide of the polynucleotide by contacting the polypeptide or peptide
CC   with the antibody of the encoded protein, and observing the binding
CC   between the two, a transformant carrying the polynucleotide in an
CC   expressible manner and an antisense polynucleotide. The oligonucleotide
CC   is useful as a primer for synthesising the polynucleotide, or as a probe
CC   for detecting the polynucleotide. The polynucleotides and encoded
CC   proteins are useful as pharmaceutical agents and many disease-related
CC   genes may be included in them, for developing a diagnostic marker or
CC   medicines for regulation of their expression and activity, or as targets
CC   of gene therapy. The genes are involved in tissue and/or cell
CC   regeneration. Membrane proteins, signal transduction-related proteins,
```

CC transcription-related proteins, disease-related proteins and genes
CC encoding them can be used as indicators for diseases (e.g. osteoporosis,
CC neurological diseases, cancer, tumours. The cDNA may be used to regulate
CC the activity or expression of the encoded protein to treat diseases. The
CC sequence presented is a cDNA of the invention. Note: Some of the sequence
CC data for this patent is not represented in the printed specification, but
CC is based on sequence information supplied by the European Patent Office.

PT Identifying agent that modulates activity of cancer-related gene, by
PT contacting compound with cell, to promote expression of gene, and
PT detecting difference in expression of gene relative to when compound is
PT not present, to identify agent.
XX
PS Claim 1; SEQ ID NO 36; 131pp; English.
XX
CC The present invention relates to methods of screening cancer-linked genes
CC and expression products for cancer diagnosis, and for screening potential
CC anti-cancer agents. Specifically claimed is a method of identifying (M1)
CC an agent that modulates activity of cancer-related genes, by contacting a
CC compound with a cell expressing a gene under conditions promoting the
CC expression of gene, and detecting difference in expression relative to
CC when the compound is not present. Also claimed are methods of identifying
CC (M2) an anti-neoplastic agent, by contacting a cell exhibiting neoplastic
CC activity with a compound first identified as a cancer related gene
CC modulator by (M1), and detecting a decrease in the neoplastic, or
CC administering agent identified by (M1) to an animal exhibiting a cancer
CC condition and detecting a decrease in the cancerous condition. Also given
CC is a protein (I), which has at least one immunogenic fragment; an
CC antibody that reacts with a protein; an immunoconjugate comprising the
CC antibody and a cytotoxic agent. The agent is useful for treating cancer,
CC by contacting a cancerous cell in vivo with an agent having activity
CC against an expression produced encoded by a gene sequence given in the
CC specification. The agent is also useful for treating cancer in an animal,
CC by eliciting the production of cytotoxic T lymphocytes specific for the
CC protein. Also described is a method of diagnosing prostate cancer. The
CC proteins are anion transport proteins specific for prostate cancer. The
CC present sequence is splice variant 1 DNA encoding a prostate cancer-
CC specific hypothetical protein FLJ.

PT New polynucleotides and polypeptides, useful for developing a diagnostic
PT marker or medicines for regulation of their expression and activity, or

PT as targets of gene therapy.
XX
PS Claim 1; Page; 222pp; English.
XX
CC The invention discloses a polynucleotide comprising a sequence selected
CC from 1970 fully defined nucleotide sequences which encode novel
CC polypeptides. Also claimed is a polypeptide encoded by the polynucleotide
CC or its partial peptide, an antibody binding to the polypeptide or peptide
CC of the polynucleotide, immunologically assaying the polypeptide or
CC peptide of the polynucleotide by contacting the polypeptide or peptide
CC with the antibody of the encoded protein, and observing the binding
CC between the two, a transformant carrying the polynucleotide in an
CC expressible manner and an antisense polynucleotide. The oligonucleotide
CC is useful as a primer for synthesising the polynucleotide, or as a probe
CC for detecting the polynucleotide. The polynucleotides and encoded
CC proteins are useful as pharmaceutical agents and many disease-related
CC genes may be included in them, for developing a diagnostic marker or
CC medicines for regulation of their expression and activity, or as targets
CC of gene therapy. The genes are involved in tissue and/or cell
CC regeneration. Membrane proteins, signal transduction-related proteins,
CC transcription-related proteins, disease-related proteins and genes
CC encoding them can be used as indicators for diseases (e.g. osteoporosis,
CC neurological diseases, cancer, tumours. The cDNA may be used to regulate
CC the activity or expression of the encoded protein to treat diseases. The
CC sequence presented is a cDNA of the invention. Note: Some of the sequence
CC data for this patent is not represented in the printed specification, but
CC is based on sequence information supplied by the European Patent Office.

PT system comprising a purified DGK (Diacylglycerol kinase) polypeptide or
PT nucleic acid.
XX
PS Disclosure; Page 74-75; 111pp; English.
XX
CC The present invention relates to a method for identifying a candidate p53
CC pathway modulating agent. The method involves providing an assay system
CC comprising a purified diacylglycerol (DAG) kinase (DGK) polypeptide or
CC nucleic acid, contacting the assay system with a test agent and detecting
CC the test agent-biased activity of the assay system where a difference
CC between the test agent-biased activity and reference activity identifies
CC the agent as a candidate p53 pathway modulating agent. The method is
CC useful for manufacturing a medicament for diagnosing or treating breast,
CC colon, lung or ovary cancer. The invention is also useful in gene
CC therapy. The present sequence is human DGK DNA

CC   The invention relates to 446 newly isolated polynucleotide sequences. The
CC   activity of polynucleotides of the invention may be described as,
CC   vulnerary, neuroprotective, immunomodulator, cytostatic and anti-
CC   inflammatory. Compositions comprising nucleic acids of the invention are
CC   useful for treating a mammalian subject, or as nutritional sources or
CC   supplements. These are useful in gene therapy, particularly for treating
CC   wounds, burns or ulcers, Alzheimer's disease, Huntington's disease,
CC   amyotrophic lateral sclerosis, autoimmune disorders, cancer or
CC   inflammation. The nucleic acids and polypeptides are also useful in
CC   diagnostic and research methods. The sequences given in records ABQ60788-
CC   ABQ61233 represent polynucleotides of the invention. NOTE: The sequence
CC   data for this patent did not form part of the printed specification, but
CC   was obtained in electronic format directly from WIPO at

XX
CC   The present invention relates to methods of screening cancer-linked genes
CC   and expression products for cancer diagnosis, and for screening potential
CC   anti-cancer agents. Specifically claimed is a method of identifying (M1)
CC   an agent that modulates activity of cancer-related genes, by contacting a
CC   compound with a cell expressing a gene under conditions promoting the
CC   expression of gene, and detecting difference in expression relative to
CC   when the compound is not present. Also claimed are methods of identifying
CC   (M2) an anti-neoplastic agent, by contacting a cell exhibiting neoplastic
CC   activity with a compound first identified as a cancer related gene
CC   modulator by (M1), and detecting a decrease in the neoplastic, or
CC   administering agent identified by (M1) to an animal exhibiting a cancer
CC   condition and detecting a decrease in the cancerous condition. Also given
CC   is a protein (I), which has at least one immunogenic fragment; an
CC   antibody that reacts with a protein; an immunoconjugate comprising the
CC   antibody and a cytotoxic agent. The agent is useful for treating cancer,
CC   by contacting a cancerous cell in vivo with an agent having activity
CC   against an expression produced encoded by a gene sequence given in the
CC   specification. The agent is also useful for treating cancer in an animal,
CC   by eliciting the production of cytotoxic T lymphocytes specific for the
CC   protein. Also described is a method of diagnosing prostate cancer. The
CC   proteins are anion transport proteins specific for prostate cancer. The
CC   present sequence is splice variant 3 DNA encoding a prostate cancer-
CC   specific hypothetical protein FLJ.

PT   New isolated polynucleotide and encoded polypeptides, useful in
PT   diagnostics, forensics, gene mapping, identification of mutations
PT   responsible for genetic disorders or other traits and to assess
PT   biodiversity.
XX
PS   Claim 1; SEQ ID NO 27431; 103pp; English.
XX
CC   The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC   sequences. (I) is useful as hybridisation probes, polymerase chain
CC   reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC   and in recombinant production of (II). The polynucleotides are also used
CC   in diagnostics as expressed sequence tags for identifying expressed
CC   genes. (I) is useful in gene therapy techniques to restore normal
CC   activity of (II) or to treat disease states involving (II). (II) is
CC   useful for generating antibodies against it, detecting or quantitating a
CC   polypeptide in tissue, as molecular weight markers and as a food
CC   supplement. (II) and its binding partners are useful in medical imaging
CC   of sites expressing (II). (I) and (II) are useful for treating disorders
CC   involving aberrant protein expression or biological activity. The
CC   polypeptide and polynucleotide sequences have applications in
CC   diagnostics, forensics, gene mapping, identification of mutations
CC   responsible for genetic disorders or other traits to assess biodiversity
CC   and to produce other types of data and products dependent on DNA and
CC   amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
CC   coding sequences of the invention. Note: The sequence data for this
CC   patent did not appear in the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   New polynucleotides encoding full-length polypeptides, e.g. secretory
PT   and/or membrane proteins, useful for developing medicines for diseases in
PT   which the gene is involved, or as target molecules for gene therapy.
XX
PS   Claim 1; SEQ ID NO 636; 205pp; English.
XX
CC   The present invention relates to novel human secretory or membrane
CC   proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-
CC   ADA54071). The coding sequences are useful in the gene therapy of
CC   diseases caused by abnormalities of the proteins, e.g. cancer,
CC   inflammatory diseases, osteoporosis or neurological disease.

XX
PT Predicting (the progression of) a toxic effect of a compound, for
PT monitoring the progression of renal disease states, comprises preparing a
PT gene expression profile of a kidney tissue or cell sample exposed to the
PT compound.
XX
PS Claim 11; SEQ ID NO 1336; 266pp; English.
XX
CC The invention relates to a method of predicting (the progression of) a
CC toxic effect of a compound by preparing a gene expression profile of a
CC kidney tissue or cell sample exposed to the compound and comparing the
CC gene expression profile to a database, or detecting the level of gene(s)
CC expression in a tissue or cell sample exposed to the compound, where
CC differential gene expression compared to a control indicates a toxic
CC effect (toxicity progression). The method is useful for predicting (the
CC progression of) at least one toxic effect of a compound. The genes are
CC useful as toxicity markers in drug screening and toxicity assays. The
CC methods are useful for predicting the likelihood that a compound or test
CC agent will induce various specific kidney pathologies, such as nephritis,
CC kidney necrosis, glomerular and tubular injury, or focal segmental
CC glomerulosclerosis. The methods are useful for determining the similarity
CC of a toxic response to one or more individual compounds and for
CC predicting or elucidating the potential cellular pathways influenced,
CC induced or modulated by the compound or test agent. The kit is useful for
CC predicting or modelling the toxic response of a test compound, for
CC monitoring the progression of renal disease states, for identifying genes
CC that show promise as new drug targets and for screening known and newly
CC designed drugs. This sequence corresponds to a gene marker used in the
CC method of the invention. (Note: The sequence data for this patent did not
CC form part of the printed specification, but was obtained in electronic
CC format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences).

XX
PS   Disclosure; Page 72-74; 111pp; English.
XX
CC   The present invention relates to a method for identifying a candidate p53
CC   pathway modulating agent. The method involves providing an assay system
CC   comprising a purified diacylglycerol (DAG) kinase (DGK) polypeptide or
CC   nucleic acid, contacting the assay system with a test agent and detecting
CC   the test agent-biased activity of the assay system where a difference
CC   between the test agent-biased activity and reference activity identifies
CC   the agent as a candidate p53 pathway modulating agent. The method is
CC   useful for manufacturing a medicament for diagnosing or treating breast,
CC   colon, lung or ovary cancer. The invention is also useful in gene
CC   therapy. The present sequence is human DGK DNA

CC   necrosis factor (TNF) receptor superfamily and the TNF-related apoptosis
CC   inducing ligand (TRAIL) receptor subfamily and its corresponding nucleic
CC   acid sequence. The sequences of the invention are useful for screening
CC   and identifying agonists and antagonists of TR16 activity which are
CC   useful for preventing or treating disorders associated with increased
CC   cell survival, unregulated cell proliferation or the inhibition of
CC   apoptosis, such as cancer, autoimmune diseases, viral infections,
CC   inflammation, graft versus host disease, acute graft rejection and
CC   chronic graft rejection and diseases associated with increased apoptosis
CC   such as AIDS, neurodegenerative disorders, myelodysplastic syndromes,
CC   ischaemic injury, toxin-induced liver disease, septic shock, cachexia and
CC   anorexia. TR16 DNA is useful in gene therapy. The present sequence is the
CC   human TR16-long receptor cDNA. The human TR16 gene is located at
CC   chromosome 7q21.

PT   Identifying tumor characteristics in a tissue sample taken from a
PT   patient, involves determining the copy number or expression level of
PT   genes associated with lipid metabolism, synthesis or action.
XX
PS   Example 1; Page 65-66; 113pp; English.
XX
CC   The present invention describes a method for identifying tumour
CC   characteristics, comprising measuring a copy number or expression level
CC   of at least two genes associated with lipid metabolism, synthesis, or
CC   action in cells from a patient tissue sample, and comparing the results
CC   with a copy number or expression level of the genes in a normal cell.
CC   Also described is an array of nucleic acid polymers immobilised on a
CC   solid support, comprising a solid support, at least two different nucleic
CC   acid polymers which are each specific for a different gene associated
CC   with lipid metabolism, synthesis or action, where each nucleic acid
CC   polymer is located at a predetermined position on the solid support, and
CC   the array comprises nucleic acid polymers which are specific for less
CC   than 100 genes other than the selected genes. The method is useful for
CC   determining tumour characteristics in a tissue sample taken from a
CC   patient. The present sequence represents a human lipid-associated gene
CC   related cDNA sequence, which is used in the exemplification of the
CC   present invention

PT polypeptide or nucleic acid.
XX
PS Disclosure; SEQ ID NO 57; 328pp; English.
XX
CC The invention relates to a method for identifying a compound capable of
CC treating a cardiovascular disorder. The present invention identifies the
CC differential expression of 1682, 6169, 6193, 7771, 14395, 29002, 33216,
CC 43726, 69292, 21656, 32427, 2402, 7747, 1720, 9151, 60491, 1371, 7077,
CC 33207, 1419, 18036, 16105, 38650, 14245, 58848, 1870, 25856, 32394, 3484,
CC 345, 9252, 9135, 10532, 18610, 8165, 2448, 2445, 64624, 84237, 8912,
CC 2868, 283, 2554, 9464, 17799, 26686, 43848, 32135, 12208, 2914, 51130,
CC 19489, 21833, 2917, 59590, 15992, 2094, 2252, 3474, 9792, 15400, 1452 or
CC 6585 genes in cardiovascular disease states. The methods are useful in
CC diagnosing, preventing and treating cardiovascular disorders, such as
CC atherosclerosis, cardiac hypertrophy, ischaemia, reperfusion injury,
CC restenosis, arterial inflammation, vascular wall remodeling, coronary
CC microembolism, tachycardia, bradycardia, pressure overload, aortic
CC bending, coronary artery ligation, vascular heart disease, valvular
CC disease, including but not limited to, valvular degeneration caused by
CC calcification, rheumatic heart disease, endocarditis, or complications of
CC artificial valves; atrial fibrillation, long-QT syndrome, congestive
CC heart failure, sinus node dysfunction, angina, heart failure,
CC hypertension, atrial fibrillation, atrial flutter, pericardial disease,
CC including but not limited to, pericardial effusion and pericarditis;
CC cardiomyopathies, e.g. dilated cardiomyopathy or idiopathic
CC cardiomyopathy, myocardial infarction, coronary artery disease, coronary
CC artery spasm, ischaemic disease, arrhythmia, sudden cardiac death and
CC cardiovascular developmental disorders. The methods may also be used for
CC identifying compounds that modulate cardiovascular disorders. Sequences
CC given in ADE31644-ADE31769 represent the genes and proteins that may be
CC regulated by a compound of the invention.

PT   New microarray, comprising a matrix of cDNA probe from a set of probes
PT   immobilized to a solid surface in predetermined order, useful in the
PT   prognosis of patients with clear cell renal carcinoma.
XX
PS   Claim 1; Page 85-86; 179pp; English.
XX
CC   The present invention relates to a microarray comprising a matrix of at
CC   least one cDNA probe from a set of probes immobilised to a solid surface
CC   in a predetermined order, where a row of pixels corresponds to replicates
CC   of one distinct probe from the set. The probes are complementary to
CC   nucleic acid sequences that are expressed differentially in aggressive as
CC   compared to non-aggressive types of clear cell renal carcinoma (CC-RCC)
CC   and that hybridise to the probes under high stringency conditions. The
CC   microarray is useful for the prognosis of patients with CC-RCC, wherein
CC   aggressive and non-aggressive CC-RCC tumour types are characterised by
CC   differential expression profiles of genes that hybridise with one or more
CC   probes immobilised on the microarray. The arrays are useful for gene
CC   expression profiling of tumour and normal tissues. The present sequence
CC   represents a human cDNA sequence up-regulated in non-aggressive CC-RCC
CC   phenotypes

PT   New isolated polynucleotide and encoded polypeptides, useful in
PT   diagnostics, forensics, gene mapping, identification of mutations
PT   responsible for genetic disorders or other traits and to assess
PT   biodiversity.
XX
PS   Claim 1; SEQ ID NO 104; 103pp; English.
XX
CC   The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC   sequences. (I) is useful as hybridisation probes, polymerase chain
CC   reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC   and in recombinant production of (II). The polynucleotides are also used
CC   in diagnostics as expressed sequence tags for identifying expressed
CC   genes. (I) is useful in gene therapy techniques to restore normal
CC   activity of (II) or to treat disease states involving (II). (II) is
CC   useful for generating antibodies against it, detecting or quantitating a
CC   polypeptide in tissue, as molecular weight markers and as a food
CC   supplement. (II) and its binding partners are useful in medical imaging
CC   of sites expressing (II). (I) and (II) are useful for treating disorders
CC   involving aberrant protein expression or biological activity. The
CC   polypeptide and polynucleotide sequences have applications in
CC   diagnostics, forensics, gene mapping, identification of mutations
CC   responsible for genetic disorders or other traits to assess biodiversity
CC   and to produce other types of data and products dependent on DNA and
CC   amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
CC   coding sequences of the invention. Note: The sequence data for this
CC   patent did not appear in the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

XX
CC   The invention relates to a novel isolated polynucleotide comprising any
CC   of the 235 nucleotide sequences described in the specification. The
CC   invention further comprises: an isolated polynucleotide encoding a
CC   polypeptide with biological activity, where the polynucleotide hybridizes
CC   to one of the 235 novel polynucleotides under stringent hybridization
CC   conditions, or having greater than about 99% sequence identity with the
CC   novel polynucleotide; a vector comprising a novel polynucleotide; an
CC   expression vector comprising the novel polynucleotide; a host cell
CC   genetically engineered to comprise the novel polynucleotide, which can be
CC   operatively associated with a regulatory sequence that modulates
CC   expression of the polynucleotide in the host cell; an isolated
CC   polypeptide encoded by the novel polynucleotide, or a polynucleotide
CC   hybridizing under stringent conditions to the novel polynucleotide; a
CC   composition comprising the polypeptide and a carrier; an antibody
CC   directed against the polypeptide; a method for detecting the novel
CC   polynucleotide in a sample; a method for detecting the polypeptide in a
CC   sample; a method for identifying a compound that binds to the polypeptide
CC   ; a method for producing the polypeptide; an isolated polypeptide
CC   comprising any of the 235 amino acid sequences described in the
CC   specification; and a collection of polynucleotides comprising of at least
CC   one of the polynucleotides cited above. The polypeptides and
CC   polynucleotides of the invention have antiinflammatory, cytostatic, and
CC   antimicrobial activities. The novel polynucleotide may be used to treat
CC   disorders by gene therapy. The polypeptides and polynucleotides are
CC   useful for treating inflammation, leukaemias, nervous system disorders,
CC   or infections. This polynucleotide sequence represents contiguous DNA
CC   derived from one of the 235 novel isolated polynucleotides of the
CC   invention.

XX
CC   The invention relates to an isolated polynucleotide (I) comprising one of
CC   245 sequences (ABQ93288-ABQ93532). Treating a condition comprising
CC   administering to a mammalian subject a composition comprising the protein
CC   (II) encoded by (I) (ABP62809-ABP63053) or an antibody (III) to (II).
CC   (I), (II) and (III) are useful for diagnostic evaluation of disorders.
CC   (I) is useful for gene therapy of diseases and (II) can be used for
CC   therapeutic treatment. Diseases that may be treated include wound healing
CC   and tissue repair, burns, central nervous system disorders (e.g.
CC   Alzheimer's, Parkinson's, Huntington's and amylotrophic lateral
CC   sclerosis), immune deficiencies, cancer, autoimmune disorders, multiple
CC   sclerosis, diabetes and allergies. Note: The sequence data for this

PT   - for gene therapy with nucleic acid encoding active BLM protein to treat
PT   Bloom's syndrome and cancer in general.
```

XX
PS Disclosure; Page; 51pp; English.
XX
CC This is a mutated BLM gene sequence isolated from four Ashkenazi Jewish
CC individuals homozygous for Bloom's Syndrome. The deletion of ATCTGA from
CC the wild type H1-5' BLM gene and insertion of TAGATTC (nucleotide
CC positions 2281 to 2287 of the present sequence) results in the insertion
CC of the novel codons for LDSR after amino acid position 735 followed by a
CC stop codon. This is one of the seven unique mutations which were
CC identified in a study of 10 people with Bloom's Syndrome. Based on the
CC various mutations, diagnostic tests for Bloom's Syndrome have been
CC developed which use standard sequence analysis techniques to detect the
CC presence of 2 mutated BLM genes or the absence of a wild-type BLM gene.
CC Note: The present sequence does not appear in the specification; it has
CC been made by modifying the H1-5' wild type BLM sequence which is provided
CC in Figure 2 (AAT67013)

XX
CC   The present invention provides the protein and coding sequences of a
CC   number of human digestive system antigens. These can be used in the
CC   diagnosis, treatment and prevention of digestive system disorders,
CC   including cancer, Meckel's diverticulum, bacterial or parasitic
CC   infections, appendicitis, Hirschsprung's disease, chronic colitis or
CC   ulcerative colitis. The present sequence is a genomic DNA fragment
CC   encoding a digestive system antigen of the invention

PT   Predicting a response to cancer treatment by detecting at least 2
PT   markers, which are genes or genomic nucleic acid sequences that are
PT   located on one chromosomal region, which is altered in malignant
PT   neoplasia.
XX
PS   Claim 7; SEQ ID NO 374; 464pp; English.
XX
CC   The invention relates to a method of predicting response to cancer
CC   treatment comprising detection of at least 2 markers, where the markers
CC   are genes and fragments or genomic nucleic acid sequences that are
CC   located on one chromosomal region, which is altered in malignant
CC   neoplasia. The invention also relates to a method for the prediction,
CC   diagnosis or prognosis of malignant neoplasia, methods for detecting
CC   deregulations in malignant neoplasia and breast cancer, a method of
CC   determining the phenotype of a cell or tissue, a method for identifying
CC   genomic regions which are altered on the chromosomal level and encode
CC   genes that are linked by function and are differentially expressed in
CC   malignant neoplasia and breast cancer, methods of screening for agents
CC   which regulate the activity of a polypeptide or a polynucleotide and
CC   antibodies that specifically bind to a full length or partial
CC   polypeptide. The method is useful for predicting response to cancer
CC   treatment. The methods and compositions are useful for predicting,
CC   diagnosing, prognosing, preventing or treating malignant neoplasia
CC   including breast cancer, ovarian cancer, gastric cancer, colon cancer,
CC   esophageal cancer, mesenchymal cancer, bladder cancer or non-small-cell
CC   lung cancer. This sequence represents a human polynucleotide used in the
CC   scope of the invention.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SUMMARIES

Result No.	Score	% Query Match	Length	DB	ID	Description

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

COMMENT Marker stdJ133N16SP6 (Primer A : TGTTCCCTCTTTGCTGCAG; Primer B :
AACAGTTCAAGGTTGTGGGC; amplimer size : 127 bp) is from sequence
generated from the SP6 end of PAC 133N16. 133N16 is part of the
bacterial clone contigs constructed by the Chromosome 6 Mapping
Group.(http://www.sanger.ac.uk/HGP/Chr6/) 133N16 is from the
library constructed at the Roswell Park Cancer Institute by the
group of Pieter de Jong.

COMMENT     This clone is available royalty-free through IMAGE Consortium
            Distributors. IMPORTANT: This sequence represents the full insert
            of this IMAGE cDNA clone. No attempt has been made to verify
            whether this corresponds to the full-length of the original mRNA
            from which it was derived.

                Web site: http://www-seq.wi.mit.edu
                Contact: sequence_submissions@genome.wi.mit.edu
            -------------- Project Information
                Center project name: L16627
                Center clone name: 120_C_5
            --------------.
            * NOTE: This record contains 83 individual
            * sequencing reads that have not been assembled into
            * contigs. Runs of N are used to separate the reads
            * and the order in which they appear is completely
            * arbitrary. Low-pass sequence sampling is useful for
            * identifying clones that may be gene-rich and allows
            * overlap relationships among clones to be deduced.
            * However, it should not be assumed that this clone
            * will be sequenced to completion. In the event that
            * the record is updated, the accession number will
            * be preserved.
            *         1      721: contig of 721 bp in length
            *       722      821: gap of 100 bp

  TITLE     Direct Submission
  JOURNAL   Submitted (23-NOV-2001) Whitehead Institute/MIT Center for Genome
            Research, 320 Charles Street, Cambridge, MA 02141, USA
COMMENT     All repeats were identified using RepeatMasker:
            Smit, A.F.A. & Green, P. (1996-1997)
            http://ftp.genome.washington.edu/RM/RepeatMasker.html
            -------------- Genome Center
                Center: Whitehead Institute/ MIT Center for Genome Research
                Center code: WIBR
                Web site: http://www-seq.wi.mit.edu

            -------------- Project Information
                Center project name: L16045
                Center clone name: 172_J_12
            --------------.
            * NOTE: This record contains 87 individual
            * sequencing reads that have not been assembled into
            * contigs. Runs of N are used to separate the reads
            * and the order in which they appear is completely
            * arbitrary. Low-pass sequence sampling is useful for
            * identifying clones that may be gene-rich and allows
            * overlap relationships among clones to be deduced.
            * However, it should not be assumed that this clone
            * will be sequenced to completion. In the event that
            * the record is updated, the accession number will
            * be preserved.
            *        1      709: contig of 709 bp in length
            *      710      809: gap of 100 bp
            *      810     1532: contig of 723 bp in length
            *     1533     1632: gap of 100 bp

            -------------- Project Information
                Center project name: L16045
                Center clone name: 172_J_12
            --------------.
            * NOTE: This record contains 87 individual
            * sequencing reads that have not been assembled into
            * contigs. Runs of N are used to separate the reads
            * and the order in which they appear is completely
            * arbitrary. Low-pass sequence sampling is useful for
            * identifying clones that may be gene-rich and allows
            * overlap relationships among clones to be deduced.
            * However, it should not be assumed that this clone
            * will be sequenced to completion. In the event that
            * the record is updated, the accession number will
            * be preserved.
            *        1      709: contig of 709 bp in length
            *      710      809: gap of 100 bp
            *      810     1532: contig of 723 bp in length
            *     1533     1632: gap of 100 bp
            *     1633     2369: contig of 737 bp in length
            *     2370     2469: gap of 100 bp

  TITLE     Direct Submission
  JOURNAL   Submitted (28-APR-1999) Yasukazu Nakamura, Kazusa DNA Research
            Institute, Department of Plant Gene Research; 1532-3, Yana,
            Kisarazu, Chiba 292-0812, Japan (E-mail:ynakamu@kazusa.or.jp,
            Tel:81-438-52-3935, Fax:81-438-52-3934)
COMMENT     Address for correspondence: kaos@kazusa.or.jp
            For the latest information on annotation of this clone, please see
            http://www.kazusa.or.jp/kaos/cgi-bin/agd_graph.cgi?c=MYF24
            Genes with similarity to proteins in the databases are described in
            'product' or 'note' qualifiers.  Genes that have no significant
            protein similarity are described as 'unknown protein'.
            The software programs used to predict genes include: Grail
            (Informatics Group, Oak Ridge National Laboratory,
            http://compbio.ornl.gov/Grail-1.3/),
            GENSCAN (Chris Burge, MIT, http://CCR-081.mit.edu/GENSCAN.html),
            NetGene2 (S.M. Hebsgaard, et al., CBS, Technical University of
            Denmark, http://www.cbs.dtu.dk/services/NetGene2/) and
            SplicePredictor (Volker Brendel, Stanford University,
            http://gremlin1.zool.iastate.edu/cgi-bin/sp.cgi).
            Genes encoding tRNAs are predicted by tRNAscan-SE
            (Sean Eddy, Washington University School of Medicine, St. Louis,
            http://genome.wustl.edu/eddy/tRNAscan-SE/).
            This sequence may not be the entire insert of this clone. It may be
            shorter because we remove overlaps between neighboring submissions.
            The 5' clone is MIE15 and the 3' clone is K24M9.

  JOURNAL   Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
            Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Dec 29, 1998 this sequence version replaced gi:4007165.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr6
            RP1-30M3 is from the library RPCI-1 constructed by the group of
            Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pCYPAC2
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: vega@sanger.ac.uk
            --------------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.

  JOURNAL    Submitted (30-JUL-2002) Human Genome Sequencing Center, Department
             of Molecular and Human Genetics, Baylor College of Medicine, One
             Baylor Plaza, Houston, TX 77030, USA
COMMENT      On Apr 27, 2002 this sequence version replaced gi:18853586.
             INFORMATION: http://www.hgsc.bcm.tmc.edu/ or email
             gc-help@bcm.tmc.edu

             CLONE LENGTH: This sequence does not necessarily represent the
             entire insert of this clone. Overlapping regions of clones are only
             sequenced and submitted once, so the sequence for the remainder of
             the insert may be found in the record for the adjacent clones.
             Overlapping clones are noted at the beginning and end of the
             Features listing.

             ANNOTATION OF FEATURES:
                STSs are identified using ePCR (Genome Res. 7:541-550) searches
             of a local database that includes entries from dbSTS, GDB, and
             local mapping efforts.
                Repeats are identified using RepeatMasker (A. Smit and P. Green,
             unpublished.) for Human and Mouse sequences.
                Genes and Region of sequence similarity are identified by BLAST
             (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the
             EST and cDNA sequences. Genes demonstrate at least two exons
             flanked by consensus splice sites that maintained sequence
             continuity across the splice junctions. Sequences that are not
             identical matches are annotated as similar.

             SEQUENCING READ COVERAGE:Sequencing is completed to a minimum
             standard of double strand coverage with a minimum of 2 clones and 2
             reads with no ambiguities or 2 chemistries with a minimum of 2
             clones and 3 reads with no ambiguities. If the sequence quality for
             a region does not meet this standard, it will be indicated in the
             annotation as Low Coverage.

             QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality
             standards - estimated error rate less than 1 per 10,000 bases.
             Reports of lowest quality individual bases and measures of base
             quality are listed below. Description of the metrics can be found
             at URL:
             http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.

COMMENT     On Feb 13, 2004 this sequence version replaced gi:27923715.
            -------------- Genome Center
                Center: Washington University Genome Sequencing Center
                Center code: WUGSC
                Web site: http://genome.wustl.edu
                Contact: submissions@watson.wustl.edu
            -------------- Summary Statistics
                Center project name: M_BA0298I23
            --------------.

            NOTICE:  This sequence may not represent the entire insert of this
            clone.  It may be shorter because we only sequence overlapping
            clone sections once, or longer because we provide a small overlap
            between neighboring data submissions.

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone, fosmid clone or direct clone walk sequence.
            Sequence from the Mouse Genome Sequencing Consortium whole genome
            shotgun may have been used to obtain the consensus sequence; and
            the assembly was confirmed by  restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. Wes Warren,
            Department of Genetics, Washington University, St. Louis MO. For
            additional information about the map position of this sequence, see
            http://genome.wustl.edu

            SOURCE INFORMATION:
            The RPCI-23 BAC Library has been constructed by Kazutoyo Osegawa
            and Minako Tateno in the laboratory of Pieter de Jong
            (http://www.chori.org) from female C57BL/6J mouse kidney and/or
            brain genomic DNA.  The clone and detailed information can be
            obtained from Research Genetics, Inc. (http://www.resgen.com) or
            Pieter de Jong and coworkers at http://www.chori.org

            NEIGHBORING SEQUENCE INFORMATION:
            This sequence is the entire insert of the clone. This clone is
            overlapped by AC121567.

  TITLE     Direct Submission
  JOURNAL   Submitted (03-JUN-2005) The Institute for Genomic Research, 9712
            Medical Center Dr, Rockville, MD 20850, USA
COMMENT     On Jun 3, 2005 this sequence version replaced gi:61967003.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 12 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
```

```
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    17642: contig of 17642 bp in length
            *    17643    17742: gap of unknown length
            *    17743    20485: contig of 2743 bp in length
            *    20486    20585: gap of unknown length
            *    20586    23045: contig of 2460 bp in length
            *    23046    23145: gap of unknown length
            *    23146    49182: contig of 26037 bp in length
            *    49183    49282: gap of unknown length
            *    49283    52132: contig of 2850 bp in length
            *    52133    52232: gap of unknown length
            *    52233    77714: contig of 25482 bp in length
            *    77715    77814: gap of unknown length
            *    77815    80269: contig of 2455 bp in length
            *    80270    80369: gap of unknown length
            *    80370    87965: contig of 7596 bp in length
            *    87966    88065: gap of unknown length
            *    88066    90240: contig of 2175 bp in length
            *    90241    90340: gap of unknown length
            *    90341   105239: contig of 14899 bp in length
            *   105240   105339: gap of unknown length
            *   105340   119636: contig of 14297 bp in length
            *   119637   119736: gap of unknown length
            *   119737   131005: contig of 11269 bp in length.

            --------------.

            NOTICE:  This sequence may not represent the entire insert of this
            clone.  It may be shorter because we only sequence overlapping
            clone sections once, or longer because we provide a small overlap
            between neighboring data submissions.

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. John D.
            McPherson, Department of Genetics, Washington University, St. Louis
            MO. For additional information about the map position of this
            sequence, see http://genome.wustl.edu/gsc

            SOURCE INFORMATION:
            The RPCI-11 human BAC library was made from the blood of one male
            donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E.,
            Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved
            approach for construction of bacterial artificial chromosome
```

```
          libraries. Genomics 51:1-8. The clone may be obtained either from
          Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
          and coworkers at http://www.chori.org
          VECTOR:  pBACe3.6

          NEIGHBORING SEQUENCE INFORMATION:
          This sequence is not the entire insert of the clone. This clone is
          overlapped by AC095040 and AC105384.

          The sequence of AC016488 has been incorporated into AC124017.

            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 8 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.

COMMENT     On Nov 11, 2004 this sequence version replaced gi:54312159.
            -------------- Genome Center
                 Center: NIH Intramural Sequencing Center
                 Center code: NISC
                 Web site: http://www.nisc.nih.gov
                 Contact: nisc_zoo@nhgri.nih.gov
            -------------- Project Information
                 Center project name: ifi
                 Center clone name: 012D21

            The sequence data in this record represents an 'enhanced'
            version of a Phase 2 submission. Specifically, the indicated
            order and orientation of each sequence contig has been
            established using one or more of the following: read-pair
            data from individual subclones, overlaps with neighboring
            clones, alignment with available reference sequence (e.g.,
            human), and/or confirmation by PCR testing. In addition,
            the sequence assembly is based on at least 8X average
            coverage in Q20 bases and has been reviewed to rule out
            gross misassemblies, the low-quality ends of sequence
            contigs have been trimmed away, and each base is associated
            with a Phrap-derived quality score.
            -------------- Summary Statistics
                 Sequencing vector: plasmid; n/a; 100% of reads
                 Chemistry: Dye-terminator Big Dye; 100% of reads
                 Assembly program: Phrap; version 0.990319
                 Consensus quality: 149480 bases at least Q40
                 Consensus quality: 149754 bases at least Q30
                 Consensus quality: 149909 bases at least Q20
                 Insert size: 155000; agarose-fp
                 Insert size: 149944; sum-of-contigs
                 Quality coverage: 9.52x in Q20 bases; agarose-fp
                 Quality coverage: 9.84x in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 5 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *        1    36273: contig of 36273 bp in length
            *    36274    36373: gap of unknown length
            *    36374    55049: contig of 18676 bp in length
            *    55050    55149: gap of unknown length
            *    55150   101939: contig of 46790 bp in length
            *   101940   102039: gap of unknown length
            *   102040   114806: contig of 12767 bp in length
            *   114807   114906: gap of unknown length
            *   114907   150344: contig of 35438 bp in length.

                Drafting Center: WIBR
            --------------.

            NOTICE:  This sequence may not represent the entire insert of this
            clone.  It may be shorter because we only sequence overlapping
            clone sections once, or longer because we provide a small overlap
            between neighboring data submissions.

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. John D.
            McPherson, Department of Genetics, Washington University, St. Louis
            MO. For additional information about the map position of this
            sequence, see http://genome.wustl.edu/gsc

            SOURCE INFORMATION:
            The RPCI-11 human BAC library was made from the blood of one male
            donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E.,
            Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved
            approach for construction of bacterial artificial chromosome
            libraries. Genomics 51:1-8. The clone may be obtained either from
            Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
            and coworkers at http://www.chori.org
            VECTOR:  pBACe3.6

            NEIGHBORING SEQUENCE INFORMATION:
            Actual start of this clone is at base position 1 of RP11-724H6;
            actual end is at base position 158145 of RP11-724H6.

            The sequence of AC027502 has been incorporated into AC104664.

            -------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep Clone-derived
            Zebrafish pUC subclones occasionally display inconsistency over the
            length of mononucleotide A/T runs and conserved TA repeats. Where
            this is found the longest good quality representation will be
            submitted.
            Repeat names beginning 'Dr' were identified by the Recon repeat
            discovery system (Zhirong Bao and Sean Eddy, submitted), and those
            beginning 'drr' were identified by Rick Waterman (Stephen Johnson
            lab, WashU).  For further information see
            http://www.sanger.ac.uk/Projects/D_rerio/fishmask.shtml CH211-242L1
            is from a CHORI-211 BAC library

* NOTE: This is a 'working draft' sequence. It currently
* consists of 67 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

            -------------- Summary Statistics
                Center project name: M_BA0225D14
            --------------.

            NOTICE:  This sequence may not represent the entire insert of this
            clone.  It may be shorter because we only sequence overlapping
            clone sections once, or longer because we provide a small overlap
            between neighboring data submissions.

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. Wes Warren,
            Department of Genetics, Washington University, St. Louis MO. For
            additional information about the map position of this sequence, see
            http://genome.wustl.edu

            SOURCE INFORMATION:
            The RPCI-23 BAC Library has been constructed by Kazutoyo Osegawa
            and Minako Tateno in the laboratory of Pieter de Jong
            (http://www.chori.org) from female C57BL/6J mouse kidney and/or
            brain genomic DNA.  The clone and detailed information can be
            obtained from Research Genetics, Inc. (http://www.resgen.com) or
            Pieter de Jong and coworkers at http://www.chori.org

            NEIGHBORING SEQUENCE INFORMATION:
            This sequence is the entire insert of the clone.

            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr6
            RP11-195J19 is from the library RPCI-11.1 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm

            -------------- Summary Statistics
                Center project name: M_BA0019M11
            --------------.

            NOTICE:

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. Wes Warren,
            Department of Genetics, Washington University, St. Louis MO. For
            additional information about the map position of this sequence, see
            http://genome.wustl.edu

            SOURCE INFORMATION:
            The RPCI-23 BAC Library has been constructed by Kazutoyo Osegawa
            and Minako Tateno in the laboratory of Pieter de Jong
            (http://www.chori.org) from female C57BL/6J mouse kidney and/or
            brain genomic DNA.  The clone and detailed information can be
            obtained from Research Genetics, Inc. (http://www.resgen.com) or
            Pieter de Jong and coworkers at http://www.chori.org

            NEIGHBORING SEQUENCE INFORMATION:
            This sequence is the entire insert of the clone.

LOCUS       AL442064               169905 bp    DNA     linear   PRI 18-MAY-2005
DEFINITION  Human DNA sequence from clone RP11-272D1 on chromosome 9 Contains
            the 3' end of the EDG2 gene for endothelial differentiation,
            lysophosphatidic acid G-protein-coupled receptor, 2, complete
            sequence.

COMMENT     On Apr 8, 2004 this sequence version replaced gi:28475434.
            -------------- Genome Center
                Center: Washington University Genome Sequencing Center
                Center code: WUGSC
                Web site: http://genome.wustl.edu
                Contact: submissions@watson.wustl.edu
            -------------- Summary Statistics
                Center project name: M_BA0480D07
            --------------.

            NOTICE:

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone, fosmid clone or direct clone walk sequence.
            Sequence from the Mouse Genome Sequencing Consortium whole genome
            shotgun may have been used to obtain the consensus sequence; and
            the assembly was confirmed by  restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. Wes Warren,
            Department of Genetics, Washington University, St. Louis MO. For
            additional information about the map position of this sequence, see
            http://genome.wustl.edu

            SOURCE INFORMATION:
            The RPCI-23 BAC Library has been constructed by Kazutoyo Osegawa
            and Minako Tateno in the laboratory of Pieter de Jong
            (http://www.chori.org) from female C57BL/6J mouse kidney and/or
            brain genomic DNA.  The clone and detailed information can be
            obtained from Research Genetics, Inc. (http://www.resgen.com) or
            Pieter de Jong and coworkers at http://www.chori.org

            NEIGHBORING SEQUENCE INFORMATION:
            This sequence is the entire insert of the clone.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.
The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr6
RP11-948M1 is from the library RPCI-11.4 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm

TITLE Direct Submission
JOURNAL Submitted (01-JUL-2005) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On Jun 29, 2005 this sequence version replaced gi:67972703.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature

```
table.

    Center: Baylor College of Medicine
    Center code: BCM
    Web site: http://www.hgsc.bcm.tmc.edu/
    Contact: hgsc-help@bcm.tmc.edu
-------------- Project Information
    Center project name: FIIJ
    Center clone name: CH240-146A5
-------------- Summary Statistics
    Assembly program: Atlas 3.0;
    Consensus quality: 174486 bases at least Q40
    Consensus quality: 175765 bases at least Q30
    Consensus quality: 176748 bases at least Q20
    Estimated insert size: 178361; sum-of-contigs estimation
    Quality coverage: 8x in Q20 bases; sum-of-contigs estimation
--------------
* NOTE: Estimated insert size may differ from sequence length
*   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 11 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
*        1    36455: contig of 36455 bp in length
*    36456    36505: gap of 50 bp
*    36506    42142: contig of 5637 bp in length
*    42143    42192: gap of 50 bp
*    42193    47072: contig of 4880 bp in length
*    47073    47122: gap of 50 bp
*    47123    87942: contig of 40820 bp in length
*    87943    87992: gap of 50 bp
*    87993    94381: contig of 6389 bp in length
*    94382    94431: gap of 50 bp
*    94432   123017: contig of 28586 bp in length
*   123018   123067: gap of 50 bp
*   123068   146637: contig of 23570 bp in length
*   146638   146687: gap of 50 bp
*   146688   172253: contig of 25566 bp in length
*   172254   172303: gap of 50 bp
*   172304   175780: contig of 3477 bp in length
*   175781   175880: gap of unknown length
*   175881   176918: contig of 1038 bp in length
*   176919   177018: gap of unknown length
*   177019   178252: contig of 1234 bp in length.

            -------------- Project Information
            Center project name:The Chimpanzee Chromosome 22 Sequencing Project
            Center clone name: PTB-141K15
            -------------- Summary Statistics
            Sequencing vector: pUC18,pUC13,pTZ19R; 100% of reads Chemistry:
            Dye-terminator Big Dye and ET; 100% of reads Assembly program:
            Phrap; version 0.990329
            Consensus quality:   183,519 bases at least Q40
            Consensus quality:         2 bases at least Q30
            Consensus quality:         0 bases at least Q20
            --------------
            This sequence was finished as follows unless otherwise noted: all
            regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30);
```

an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at one plasmid
subclone or more than one M13 subclone;
and the assembly was confirmed by restriction digest.

Source information:
The RPCI-43 chimpanzee BAC library was prepared from DNA isolated from the blood of a single male chimpanzee using published protocols (Osoegawa,K. et al. Genomics 52:1-8). The DNA from the chimpanzee ('Clint') was obtained from the Yerkes Primate Center in Atlanta. The library was prepared by Baoli Zhu, Chung Li Shu, Kazutoyo Osoegawa, Evan Eichler & Pieter J de Jong. The library characteristics are described at
http://www.chori.org/bacpac/mchimp43.htm.
The clone may be obtained from Pieter J. de Jong and coworkers (http://www.chori.org/bacpac).
VECTOR: pBACe3.6
The CHORI-251 chimpanzee BAC library was prepared from DNA isolated from the blood of a single male chimpanzee using published protocols (Osoegawa,K. et al. Genomics 52:1-8). The DNA from the chimpanzee ('Clint') was obtained from the Yerkes Primate Center in Atlanta. The library was prepared by Baoli Zhu, Chung Li Shu, Kazutoyo Osoegawa, Evan Eichler & Pieter J de Jong. The library characteristics are described at
http://www.chori.org/bacpac/chimpanzee251.htm.
The clone may be obtained from Pieter J. de Jong and coworkers (http://www.chori.org/bacpac).
VECTOR: pTARBAC2.1
The PTB1 chimpanzee BAC library was prepared from DNA isolated from cultured cells established from the blood of a single male chimpanzee.
Clones may be obtained from Asao Fujiyama and co-workers (http://www.gsc.riken.go.jp).
VECTOR: pKS145
The PTF22 chimpanzee Fosmid library was prepared from DNA isolated from cultured cells established from the blood of a single male chimpanzee.
Clones may be obtained from Asao Fujiyama and co-workers (http://www.gsc.riken.go.jp).
VECTOR: pKS143

Sequence Quality Assessment:
This entry has been annotated with sequence estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality zero.
Quality levels above 40 are expected to have less than 1 error in 10,000 bp.

Neighboring clones: PTB-084P08(left) and PTB-131J13(right).

            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 22 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1138: contig of 1138 bp in length

            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 3 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.

            ------------------------------------------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 11 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
```

```
            * be preserved.

            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP23-435F21 is
            from the RPCI-23 Mouse PAC Library
            constructed by the group of Pieter de Jong.
            For further details see http://www.chori.org/bacpac/home.htm

  TITLE     Direct Submission
  JOURNAL   Submitted (19-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 6, 2002 this sequence version replaced gi:23907972.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

            -------------- Project Information
                Center project name: GWRT
                Center clone name: CH230-451P6
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 170359 bases at least Q40
                Consensus quality: 172159 bases at least Q30
                Consensus quality: 173141 bases at least Q20
                Estimated insert size: 172237; sum-of-contigs estimation
                Quality coverage: 7x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 1 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *         1   205582: contig of 205582 bp in length.

            -------------- Summary Statistics
            Sequencing vector: pUC18,pUC13,pTZ19R; 100% of reads Chemistry:
            Dye-terminator Big Dye and ET; 100% of reads Assembly program:
            Phrap; version 0.990329
            Consensus quality:   211,905 bases at least Q40
            Consensus quality:     2,026 bases at least Q30
            Consensus quality:       258 bases at least Q20
            --------------
            This sequence was finished as follows unless otherwise noted: all
            regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30);
            an attempt was made to resolve all sequencing problems, such as
            compressions and repeats; all regions were covered by at one
            plasmid
            subclone or more than one M13 subclone;
            and the assembly was confirmed by restriction digest.
            --------------
            Source information:
            The RPCI-43 chimpanzee BAC library was prepared from DNA isolated
            from the blood of a single male chimpanzee using published
            protocols (Osoegawa,K. et al. Genomics 52:1-8). The DNA from the
            chimpanzee ('Clint') was obtained from the Yerkes Primate Center in
            Atlanta. The library was prepared by Baoli Zhu, Chung Li Shu,
            Kazutoyo Osoegawa, Evan Eichler & Pieter J de Jong. The library
            characteristics are described at

            The PTF22 chimpanzee Fosmid library was prepared from DNA isolated
            from cultured cells established from the blood of a single male
            chimpanzee.
            Clones may be obtained from Asao Fujiyama and co-workers
            (http://www.gsc.riken.go.jp).

            --------------
            Sequence Quality Assessment:
            This entry has been annotated with sequence
            estimates computed by the Phrap assembly program.
            All manually edited bases have been reduced to quality zero.
            Quality levels above 40 are expected to have less than 1 error in
            10,000 bp.
            ----------------------
            Neighboring clones: PTB-141K15(left) and PTB-018G23(right).

  TITLE     Direct Submission
  JOURNAL   Submitted (01-JUL-2005) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Jun 26, 2005 this sequence version replaced gi:58038148.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

            -------------- Summary Statistics
                Assembly program: Atlas 3.0;
                Consensus quality: 206062 bases at least Q40
                Consensus quality: 207854 bases at least Q30
                Consensus quality: 209322 bases at least Q20
                Estimated insert size: 210645; sum-of-contigs estimation
                Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 19 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.

  TITLE     Direct Submission
  JOURNAL   Submitted (10-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 10, 2003 this sequence version replaced gi:24818369.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

  TITLE     Direct Submission
  JOURNAL   Submitted (09-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 9, 2003 this sequence version replaced gi:24818187.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

  TITLE     Direct Submission
  JOURNAL   Submitted (09-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 9, 2003 this sequence version replaced gi:24942737.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM

                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: GADZ
                Center clone name: CH230-2K14
            -------------- Summary Statistics
                Assembly program: Atlas;
                Consensus quality: 244860 bases at least Q40
                Consensus quality: 247754 bases at least Q30
                Consensus quality: 249340 bases at least Q20
                Estimated insert size: 268126; sum-of-contigs estimation
                Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
```

```
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
            * NOTE: This sequence may represent more than one clone.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 2 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1   254326: contig of 254326 bp in length
            *  254327   254426: gap of unknown length
            *  254427   255706: contig of 1280 bp in length.

            Center project name: bA130J18
            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Sequencing vector: plasmid; L08752; 100% of reads
            Chemistry: Dye-terminator ET-amersham; 40% of reads Chemistry:
            Dye-terminator Big Dye; 59% of reads
            Consensus quality: 319527 bases at least Q40
            Consensus quality: 331637 bases at least Q30
            Consensus quality: 338755 bases at least Q20
            Insert size: 343679; sum-of-contigs
            Insert size: 228267; 48.0% error; agarose-fp
            Quality coverage: 3.54x in Q20 bases; sum-of-contigs Quality
            coverage: 6.60x in Q20 bases; agarose-fp
            --------------
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 49 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1     5244: contig of 5244 bp in length

            Primer B: No sequence submitted
            STS size: 444
            Protocol:
            WGS-discovery (WGS):
            Paired-end low-coverage whole genome shotgun reads were generated
            from 9 breeds
            (German Shepherd, Rottweiler, Bedlington Terrier, Beagle, Labrador
            Retriever, English
```

Shepherd, Italian Greyhound, Alaskan Malamute and the Portuguese Water Dog -100,000 each)
and five other canids (Chinese, Alaskan, Indian and Spanish Gray Wolf as well as the
Californian Coyote).
The WGS reads were placed uniquely on the CanFam1.0 boxer assembly and SNP detection was
carried out by SSAHA-SNP. 863872 reads were annotated as STSs and 485941 SNPs were
annotated with alleles from the boxer and the breed or canid from which the particular
read came. The validation rate for these SNPs was estimated at approximately 98%.
WGA-discovery (WGA) of Boxer/Poodle SNPs:
A second set of SNPs was generated using a similar methodology except that the contigs
from the 1.5x poodle assembly (Kirkness 2003) were used instead of WGS reads. Since this
sequence lacked base quality scores, arbitrary quality scores of phred 40 were assigned
before the poddle seqeunce was placed uniquely on the CanFam1.0 boxer assembly and SNP
detection was carried out by SSAHA-SNP. 1637780 SNPs were annotated with alleles from the
boxer and the poodle. The validation rate for these SNPs was estimated at approximately TBD%.
Internal-WGA-discovery (I-WGA):
A third set of SNPs were discovered by comparing reads in the WGA assembly. SNPs were
defined as mismatch positions that had a base quality of >= 30 on both reads in a region
that aligned without gaps, and with at most one additional mismatch in the ten flanking
bases. For each allele, at least one additional read had to confirm it. 731476 SNPs were
annotated with alleles between the two boxer alleles. The validation rate for these SNPs
was estimated at approximately TBD%.

            Clone distribution: MGC clone distribution information can be found
            through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov
            Series: IRAK Plate: 109 Row: l Column: 17
            This clone was selected for full length sequencing because it
            passed the following selection criteria: matched mRNA gi: 27370049.

            -------------- Project Information
                Center project name: GCNK
                Center clone name: CH230-7N18
            -------------- Summary Statistics
                Chemistry: Dye-terminator Big Dye: 100% of reads
                Assembly program: Phrap; version 0.990329
                Consensus quality: 18027 bases at least Q40
                Consensus quality: 19915 bases at least Q30
                Consensus quality: 21196 bases at least Q20
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 33 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1045: contig of 1045 bp in length
            *     1046     1145: gap of unknown length
            *     1146     2264: contig of 1119 bp in length

LOCUS       AL162613               79949 bp    DNA     linear   PRI 18-MAY-2005
DEFINITION  Human DNA sequence from clone RP11-182C2 on chromosome 10 Contains
            the 5' end of the ADD3 gene for adducin 3 (gamma) and a CpG island,
            complete sequence.
ACCESSION   AL162613
VERSION     AL162613.22  GI:15617245
KEYWORDS    HTG; ADD3.
SOURCE      Homo sapiens (human)

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
            Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Sep 13, 2001 this sequence version replaced gi:15131971.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 10, constructed by the Sanger Centre Chromosome 10
            Mapping Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr10
            RP11-182C2 is from the library RPCI-11.1 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6

            --------------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SUMMARIES
